		<p>procured and delivered in the facility's local area, and that the contractor will continue to supply the essential items throughout and to the end of emergencies of varying duration.</p> <p>Survey Procedures</p> <ul style="list-style-type: none"> • Verify the facility has an emergency preparedness plan by asking to see a copy of the plan. • Ask facility leadership to identify the hazards (e.g. natural, man-made, facility, geographic, etc.) that were identified in the facility's risk assessment and how the risk assessment was conducted. • Review the plan to verify it contains all of the required elements. • Verify that the plan is reviewed and updated annually by looking for documentation of the date of the review and updates that were made to the plan based on the review. 																	
0005 Transplant EP Policies included in Hospital §482.78(a)	§482.78(a) Standard: Policies and procedures. A transplant center must have policies and procedures that address emergency preparedness. These policies and procedures must be included in the hospital's emergency preparedness program.	<p>Transplant centers must be actively involved in their hospital's emergency planning and programming under §482.15(g). The transplant center's emergency preparedness plans must be included in the hospital's emergency plans. All of the Medicare-approved transplant centers are located within certified hospitals and, as part of the hospital, must be included in the hospital's emergency preparedness plans. The transplant center needs to be involved in the hospital's risk assessment because there may be risks to the transplant center that others in the hospital may not be aware of or appreciate. However, most of the risk assessment of the hospital and transplant center would be the same since the transplant center is located within the hospital. Therefore a separate risk assessment would be unnecessary and overly burdensome.</p> <p>Survey Procedures</p> <ul style="list-style-type: none"> • Verify the transplant center has emergency preparedness policies and procedures. • Verify that the transplant center's emergency preparedness policies and procedures are included in the hospital's emergency preparedness program. 0006 Maintain and Annual EP Updates §403.748(a)(1)-(2), §416.54(a)(1)-(2), §418.113(a)(1)-(2), §441.184(a)(1)-(2), §460.84(a)(1)-(2), §482.15(a)(1)-(2), §483.73(a)(1)-(2), §483.475(a)(1)-(2), §484.22(a)(1)-(2), §485.68(a)(1)-(2), §485.625(a)(1)-(2), §485.727(a)(1)-(2),	<p>[(a) Emergency Plan. The [facility] must develop and maintain an emergency preparedness plan that must be reviewed, and updated at least annually. The plan must do the following:]</p> <p>(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach.*</p> <p>*[For LTC facilities at §483.73(a)(1):] (1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach, including missing residents.</p> <p>*[For ICF/IIDs at §483.475(a)(1):] (1) Be based on and include a documented, facility-based and community-based risk</p>	<p>Facilities are expected to develop an emergency preparedness plan that is based on the facility-based and community-based risk assessment using an "all-hazards" approach. Facilities must document both risk assessments. An example consideration may include, but is not limited to, natural disasters prevalent in a facility's geographic region such as wildfires, tornados, flooding, etc. An all-hazards approach is an integrated approach to emergency preparedness planning that focuses on capacities and capabilities that are critical to preparedness for a full spectrum of emergencies or disasters. This approach is specific to the location of the facility considering the types of hazards most likely to occur in the area. Thus, all-hazards planning does not specifically address every possible threat or risk but ensures the facility will have the capacity to address a broad range of related emergencies. Facilities are</p>	Y	Y	Y	Y	Y	Y	N	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

0012 Transplant EP Policies included in Hospital §482.78(a), and §482.78(b).	§ 482.78 Condition of participation: Emergency preparedness for transplant centers. A transplant center must be included in the emergency preparedness planning and the emergency preparedness program as set forth in § 482.15 for the hospital in which it is located. However, a transplant center is not individually responsible for the emergency preparedness requirements set forth in § 482.15. (a) Standard: Policies and procedures. A transplant center must have policies and procedures that address emergency preparedness. These policies and procedures must be included in the hospital's emergency preparedness program. (b) Standard: Protocols with hospital and OPO. A transplant center must develop and maintain mutually agreed upon protocols that address the duties and responsibilities of the transplant center, the hospital in which the transplant center is operated, and the OPO designated by the Secretary, unless the hospital has an approved waiver to work with another OPO, during an emergency.	Hospitals which have transplant centers must include within their emergency planning and preparedness process one representative, at minimum, from the transplant center. If a hospital has multiple transplant centers, each center must have at least one representative who is involved in the development and maintenance of the hospital's emergency preparedness process. The hospital must include the transplant center in its emergency preparedness plan policies and procedures, communication plans, as well is the training and testing programs. Both the hospital and the transplant center are required to demonstrate during a survey that they have coordinated in planning and the development of the emergency program. Both are required to have written documentation of the emergency preparedness plans. However, the transplant center is not individually responsible for the emergency preparedness requirements under §482.15. Survey Procedures <ul style="list-style-type: none"> Verify the hospital has written documentation to demonstrate that a representative of each transplant center participated in the development of the emergency program. Ask to see documentation of emergency protocols that address transplant protocols that include the hospital, the transplant center and the associated OPOs. 	N	N	N	N	N	N	Y	N	N	N	N	N	N	N	N	N	
0013 Development of EP Policies and Procedures §403.748(b), §416.54(b), §418.113(b), §441.184(b),	(b) Policies and procedures. [Facilities] must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. *Additional Requirements for PACE and ESRD Facilities:	Facilities must develop and implement policies and procedures per the requirements of this standard. The policies and procedures are expected to align with the identified hazards within the facility's risk assessment and the facility's overall emergency preparedness program. We are not specifying where the facility must have the emergency preparedness policies and procedures. A facility may choose whether to incorporate the emergency policies and procedures	Y	Y	Y	Y	Y	Y	N	Y	Y	Y	Y	Y	Y	Y	Y	Y

0015 Subsistence needs for staff and patients §403.748(b)(1), §418.113(b)(6)(iii), §441.184(b)(1), §460.84(b)(1), §482.15(b)(1), §483.73(b)(1), §483.475(b)(1), §485.625(b)(1)	<p>[(b) Policies and procedures. [Facilities] must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually.] At a minimum, the policies and procedures must address the following:</p> <p>(1) The provision of subsistence needs for staff and patients whether they evacuate or shelter in place, include, but are not limited to the following:</p> <p>(i) Food, water, medical and pharmaceutical supplies</p> <p>(ii) Alternate sources of energy to maintain the following:</p> <p>(A) Temperatures to protect patient health and safety and for the safe and sanitary storage of provisions.</p> <p>(B) Emergency lighting.</p> <p>(C) Fire detection, extinguishing, and alarm systems.</p> <p>(D) Sewage and waste disposal.</p> <p>*[For Inpatient Hospice at §418.113(b)(6)(iii):] Policies and procedures.</p> <p>(6) The following are additional requirements for hospice-operated inpatient care facilities only. The policies and procedures must address the following:</p> <p>(iii) The provision of subsistence needs for hospice employees and patients, whether they evacuate or shelter in place, include, but are not limited to the following:</p> <p>(A) Food, water, medical, and pharmaceutical supplies.</p> <p>(B) Alternate sources of energy to maintain the following:</p> <p>(1) Temperatures to protect patient health and safety and for the safe and sanitary storage of provisions.</p> <p>(2) Emergency lighting.</p> <p>(3) Fire detection, extinguishing, and alarm systems.</p> <p>(C) Sewage and waste disposal.</p>	<p>Facilities must be able to provide for adequate subsistence for all patients and staff for the duration of an emergency or until all its patients have been evacuated and its operations cease. Facilities have flexibility in identifying their individual subsistence needs that would be required during an emergency. There are no set requirements or standards for the amount of provisions to be provided in facilities, Provisions include, but are not limited to, food, pharmaceuticals and medical supplies. Provisions should be stored in an area which is less likely to be affected by disaster, such as storing these resources above ground-level to protect from possible flooding. Additionally, when inpatient facilities determine their supply needs, they are expected to consider the possibility that volunteers, visitors, and individuals from the community may arrive at the facility to offer assistance or seek shelter.</p> <p>Alternate sources of energy depend on the resources available to a facility, such as battery-operated lights, or heating and cooling, in order to meet the needs of a facility during an emergency. Facilities are not required to upgrade their electrical systems, but after review of their risk assessment, facilities may find it prudent to make any necessary adjustments to ensure that occupants health and safety needs are met, and that facilities maintain safe and sanitary storage areas for provisions.</p> <p>This specific standard does not require facilities to have or install generators or any other specific type of energy source. (However, for hospitals at §482.15(e), CAHs at §485.625(e) and LTC facilities at §483.73(e) please also refer to Tag E-0041 for Emergency and Stand-by Power Systems.) It is up to each individual facility, based on its risk assessment, to determine the most appropriate alternate energy sources to maintain temperatures to protect patient health and safety and for the safe and sanitary storage of provisions, emergency lighting, fire detection, extinguishing, and alarm systems and sewage and waste disposal. Whatever alternate sources of energy a facility chooses to utilize must be in accordance with local and state laws as well as relevant LSC requirements.</p> <p>Facilities must establish policies and procedures that determine how required heating and cooling of their facility will be maintained during an emergency situation, as necessary, if there were a loss of the primary power source.</p> <p>If a facility determines the best way to maintain temperatures, emergency lighting, fire detection and extinguishing systems and</p>	Y	N	Y	Y	Y	N	Y	Y	N	N	Y	N	N	N	N	N	N

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RNCHII	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FOHC	ESRD
		<p>sewage and waste disposal would be through the use of a portable generator, then the Life Safety Code (LSC) provisions, such as generator testing and fuel storage, etc. outlined under the NFPA guidelines would not be applicable. Portable generators should be operated, tested, and maintained in accordance with manufacturer, local and/or State requirements. If a facility, however, chooses to utilize a permanent generator to maintain emergency power, LSC provisions such as generator testing and maintenance will apply and the facility may be subject to LSC surveys to ensure compliance is met.</p> <p>As an example, some ESRD facilities have contracted services with companies who maintain portable emergency generators for the facilities off-site. In the event of an emergency where the facility is unable to reschedule patients or evacuate, the generators are brought to the location in advance to assist in the event of loss of power. Facilities who are not specifically required by the EP Final Rule to have a generator, but are required to meet provision for an alternate sources of energy, may consider this approach for their facility.</p> <p>Facilities are encouraged to confer with local health department and emergency management officials, as well as and healthcare coalitions, where available, to determine the types and duration of energy sources that could be available to assist them in providing care to their patient population during an emergency. As part of the risk assessment planning, facilities should determine the feasibility of relying on these sources and plan accordingly.</p> <p>Facilities are not required to provide onsite treatment of sewage but must make provisions for maintaining necessary services. For example, LTC facilities are already required to meet Food Receiving and Storage provisions at §483.35(i) Sanitary Conditions, which contain requirements for keeping food off the floor and clear of ceiling sprinklers, sewer/waste disposal pipes, and vents can also help maintain food quality and prevent contamination. Additionally, ESRD facilities under current CfCs at §494.40(a)(4) are also required to have policies and procedures for handling, storage and disposal of potentially infectious waste. We are not specifying any required provisions regarding treatment of sewage and necessary services under this tag; however, facilities are required to follow their current facility-type requirements (e.g., CoPs/CfCs, Requirements) which may address these areas. Additionally, we would expect facilities under this requirement to ensure current practices are followed, such as those outlined by the Environmental Protection Agency (EPA) and under State-specific laws. Maintaining</p>

		<p>necessary services may include, but are not limited to, access to medical gases; treatment of soiled linens; disposal of bio-hazard materials for different infectious diseases; and may require additional assistance from transportation companies for safe and appropriate disposal in accordance with nationally accepted industry guidelines for emergency preparedness.</p> <p>Survey Procedures</p> <ul style="list-style-type: none"> • Verify the emergency plan includes policies and procedures for the provision of subsistence needs including, but not limited to, food, water and pharmaceutical supplies for patients and staff by reviewing the plan. • Verify the emergency plan includes policies and procedures to ensure adequate alternate energy sources necessary to maintain: <ul style="list-style-type: none"> o Temperatures to protect patient health and safety and for the safe and sanitary storage of provisions; o Emergency lighting; and, o Fire detection, extinguishing, and alarm systems. • Verify the emergency plan includes policies and procedures to provide for sewage and waste disposal. 																	
0016 Hospice Procedures for Follow-ups §418.113(b)(1):	§418.113(b)(1): Condition for Participation: [(b) Policies and procedures. The hospice must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually.] At a minimum, the policies and procedures must address the following: (1) Procedures to follow up with on duty staff and patients to determine services that are needed, in the event that there is an interruption in services during or due to an emergency. The hospice must inform State and local officials of any on-duty staff or patients that they are unable to contact.	Hospices have the flexibility to determine how best to develop these policies and procedures. For administrative purposes, all hospices should already have some mechanism in place to keep track of patients and staff contact information. However, the information regarding patient services that are needed during or after an interruption in their services and on-duty staff and patients that were not able to be contacted must be readily available, accurate, and shareable among officials within and across the emergency response system, as needed, in the interest of the patient. Survey Procedures <ul style="list-style-type: none"> • Review the emergency plan to verify it includes policies and procedures for following up with staff and patients. • Interview a staff member or leadership and ask them to explain the procedures in place in the event they are unable to contact a staff member or patient. 0017 HHA Comprehensive Assessment in disaster §484.22(b)(1)	[(b) Policies and procedures. The HHA must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually.] At a minimum, the policies and procedures must address the following:] (1) The plans for the HHA's patients during a natural or man-made disaster. Individual plans for each patient must be included as part of the comprehensive patient assessment, which must be conducted according to the provisions at §484.55.	HHAs must include policies and procedures in its emergency plan for ensuring all patients have an individualized plan in the event of an emergency. That plan must be included as part of the patient's comprehensive assessment. For example, discussions to develop individualized emergency preparedness plans could include potential disasters that the patient may face within the home such as fire hazards, flooding, and tornados; and how and when a patient is to contact local emergency officials. Discussions may also include patient, care providers, patient representative, or any person involved in the clinical care aspects to educate them on steps that can be taken to improve the patient's safety. The individualized emergency plan should be in writing and could be as simple as a detailed emergency card to be kept with the patient. HHA personnel should document that these discussions	N	N	N	N	N	N	N	N	Y	N	N	N	N	N	N	N	N

		<p>occurred and also keep a copy of the individualized emergency plan in the patient's file as well as provide a copy to the patient and or their caregiver.</p> <p>Survey Procedures</p> <ul style="list-style-type: none"> Through record review, verify that each patient has an individualized emergency plan documented as part of the patient's comprehensive assessment. 																	
0018 Procedures for Tracking of Staff and Patients §403.748(b)(2), §416.54(b)(1), §418.113(b)(6)(ii) and (v), §441.184(b)(2), §460.84(b)(2), §482.15(b)(2), §483.73(b)(2), §483.475(b)(2), §485.625(b)(2), §485.920(b)(1), §486.360(b)(1), §494.62(b)(1).	<p>[(b) Policies and procedures. The [facilities] must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually.] At a minimum, the policies and procedures must address the following:]</p> <p>(2) A system to track the location of on-duty staff and sheltered patients in the [facility's] care during an emergency. If on-duty staff and sheltered patients are relocated during the emergency, the [facility] must document the specific name and location of the receiving facility or other location.</p> <p>*[For PRTFs at §441.184(b), LTC at §483.73(b), ICF/IIDs at §483.475(b), PACE at §460.84(b):] Policies and procedures. (2) A system to track the location of on-duty staff and sheltered residents in the [PRTF's, LTC, ICF/IID or PACE] care during and after an emergency. If on-duty staff and sheltered residents are relocated during the emergency, the [PRTF's, LTC, ICF/IID or PACE] must document the specific name and location of the receiving facility or other location.</p> <p>*[For Inpatient Hospice at §418.113(b)(6):] Policies and procedures.</p> <p>(ii) Safe evacuation from the hospice, which includes consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s) and primary and alternate means of communication with external sources of assistance.</p> <p>(v) A system to track the location of hospice employees' on-duty and sheltered patients in the hospice's care during an emergency. If the on-duty employees or sheltered patients are relocated during the emergency, the hospice must document the specific name and location of the receiving facility or other location.</p> <p>*[For CMHCs at §485.920(b):] Policies and procedures. (2) Safe evacuation from the CMHC, which includes consideration of care and treatment needs of evacuees; staff responsibilities;</p>	<p>Facilities must develop a means to track patients and on-duty staff in the facility's care during an emergency event. In the event staff and patients are relocated, the facility must document the specific name and location of the receiving facility or other location for sheltered patients and on-duty staff who leave the facility during the emergency.</p> <p>CMHCs, PRTF's, LTC facilities, ICF/IIDs, PACE organizations and ESRD Facilities are required to track the location of sheltered patients and staff during and after an emergency.</p> <p>We are not specifying which type of tracking system should be used; rather, a facility has the flexibility to determine how best to track patients and staff, whether it uses an electronic database, hard copy documentation, or some other method. However, it is important that the information be readily available, accurate, and shareable among officials within and across the emergency response systems as needed in the interest of the patient. It is recommended that a facility that is using an electronic database consider backing up its computer system with a secondary source, such as hard copy documentation in the event of power outages. The tracking systems set up by facilities may want to consider who is responsible for compiling/securing patient records and what information is needed during tracking a patient throughout an evacuation. A number of states already have such tracking systems in place or under development and the systems are available for use by health care providers and suppliers. Facilities are encouraged to leverage the support and resources available to them through local and national healthcare systems, healthcare coalitions, and healthcare organizations for resources and tools for tracking patients.</p> <p>Facilities are not required to track the location of patients who have voluntarily left on their own, or have been appropriately discharged, since they are no longer in the facility's care. However, this information must be documented in the patient's medical record should any questions later arise as to the patient's whereabouts.</p> <p>Note: If an ASC is able to cancel surgeries and close (meaning there are no patients or staff in the ASC), this requirement of tracking patients and staff</p>	Y	Y	Y	Y	Y	N	Y	Y	N	N	Y	N	Y	Y	N	Y

§418.113(b)(6)(ii), §441.184(b)(3), §460.84(b)(3), §482.15(b)(3), §483.73(b)(3), §483.475(b)(3), §485.68(b)(1), §485.625(b)(3), §485.727(b)(1), §485.920(b)(2), §491.12(b)(1), §494.62(b)(2)	<p>minimum, the policies and procedures must address the following:]</p> <p>Safe evacuation from the [facility], which includes consideration of care and treatment needs of evacuees; staff responsibilities; transportation; identification of evacuation location(s); and primary and alternate means of communication with external sources of assistance.</p> <p>*[For RNHCs at §403.748(b)(3) and ASCs at §416.54(b)(2):] Safe evacuation from the [RNHCI or ASC] which includes the following: (i) Consideration of care needs of evacuees. (ii) Staff responsibilities. (iii) Transportation. (iv) Identification of evacuation location(s). (v) Primary and alternate means of communication with external sources of assistance.</p> <p>* [For CORFs at §485.68(b)(1), Clinics, Rehabilitation Agencies, OPT/Speech at §485.727(b)(1), and ESRD Facilities at §494.62(b)(2):] Safe evacuation from the [CORF; Clinics, Rehabilitation Agencies, and Public Health Agencies as Providers of Outpatient Physical Therapy and Speech-Language Pathology Services; and ESRD Facilities], which includes staff responsibilities, and needs of the patients.</p> <p>* [For RHCs/FQHCs at §491.12(b)(1):] Safe evacuation from the RHC/FQHC, which includes appropriate placement of exit signs; staff responsibilities and needs of the patients.</p>	<p>Facilities must have policies and procedures which address the needs of evacuees. The facility should also consider in development of the policies and procedures, the evacuation protocols for not only the evacuees, but also staff members and families/patient representatives or other personnel who sought potential refuge at the facility. Additionally, the policies and procedures must address staff responsibilities during evacuations. Facilities must consider the patient population needs as well as their care and treatment. For example, if an evacuation is in progress and the facility must evacuate, leadership should consider the needs for critically ill patients to be evacuated and accompanied by staff who could provide care and treatment enroute to the designated relocation site, in the event trained medical professionals are unavailable by the transportation services.</p> <p>Facilities must consider in their development of policies and procedures, the needs of their patient population and what designated transportation services would be most appropriate. For instance, if a facility primarily cares for critically ill patients with ventilation needs and life-saving equipment, the transportation services should be able to assist in evacuation of this special population and be equipped to do so. Additionally, facilities may also find it prudent to consider alternative methods for evacuation and patient care and treatment, such as mentioned above to have staff members evacuate with patients in given situations.</p> <p>Additionally, facilities should consider their triaging system when coordinating the tracking and potential evacuation of patient/residents/clients. For instance, a triaging system for evacuation may consider the most critical patients first followed by those less critical and dependent on life-saving equipment. Considerations for prioritization may be based on, among other things, acuity, mobility status (stretch-bound/wheelchair/ambulatory), and location of the unit, availability of a known transfer destination or some combination thereof. Included within this system should be who (specifically) will be tasked with making triage decisions. Following the triaging system, staff should consider the communication of patient care requirements to the in-taking facility, such as attaching hard copy of standard abbreviated patient health condition/history, injuries, allergies, and treatment rendered. On the same method for communicating this information, a facility could consider color coordination of triage level (i.e. green folder with this information is for less critical patients; red folders for critical and urgent evacuated</p>																	

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RN/CHI	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FQHC	ESRD
		<p>patients, etc.). Additionally, this hard copy could include family member/representative contact information.</p> <p>Finally, facilities policies and procedures must outline primary and alternate means for communication with external sources for assistance. For instance, primarily methods may be considered via regular telephone services to contact transportation companies for evacuation or reporting evacuation needs to emergency officials; whereas alternate means account for loss of power or telephone services in the local area. In this event, alternate means may include satellite phones for contacting evacuation assistance.</p> <p>Survey Procedures</p> <ul style="list-style-type: none"> • Review the emergency plan to verify it includes policies and procedures for safe evacuation from the facility and that it includes all of the required elements. • When surveying an RHC or FQHC, verify that exit signs are placed in the appropriate locations to facilitate a safe evacuation. 																	
0021 HHAs Procedures for Follow-ups §484.22(b)(3)	<p>§484.22(b)(3) Condition of Participation:</p> <p>[(b) Policies and procedures. The HHA must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually.] At a minimum, the policies and procedures must address the following:]</p> <p>(3) The procedures to follow up with on-duty staff and patients to determine services that are needed, in the event that there is an interruption in services during or due to an emergency. The HHA must inform State and local officials of any on-duty staff or patients that they are unable to contact.</p>	<p>HHAs must include in its emergency plan, procedures required of this standard.</p> <p>During an emergency, if a patient requires care that is beyond the capabilities of the HHA, there is an expectation that care of the patient would be rearranged or suspended for a period of time, as most HHAs in general would not necessarily transfer patients to other HHAs during an emergency.</p> <p>HHAs policies and procedures should clearly outline what surrounding facilities, such as a hospital or a nursing home, it has a transfer arrangement with to ensure patient care is continued. Additionally, these policies and procedures should outline timelines for transferring patients or under what conditions patients would need to move. For instance, if the emergency is one which only is anticipated to have one or two days of disruption and does not pose immediate threat to patient health or safety (in which then the HHA should immediately transfer the patient); the HHA may rearrange services, whereas if a disaster is anticipated to last over one week or more, the HHA may need to initiate transfer of a patient as soon as possible. The policies and procedures should address these events. Additionally, the HHAs' policies and procedures must address what actions would be required due to the inability to make contact with staff or patients and reporting capabilities to the local and State emergency officials.</p> <p>Survey Procedures</p> <ul style="list-style-type: none"> • Verify that the HHA has included in its emergency plan these procedures to follow-up with staff and patients and to inform state and local authorities when they are unable to contact any of them. • Verify that the HHA has procedures in its emergency plan to follow up with on-duty staff and patients to determine the services that are needed, in the event that there is an interruption in services during or due to an emergency. • Ask the HHA to describe the mechanism to inform State and local officials of any on-duty staff or patients that they are unable to contact. 0022 Policies and Procedures for Sheltering §403.748(b)(4), §416.54(b)(3), §418.113(b)(6)(i), §441.184(b)(4), §460.84(b)(5), §482.15(b)(4), §483.73(b)(4), §483.475(b)(4), §485.68(b)(2), §485.625(b)(4), §485.727(b)(2), §485.920(b)(3), §491.12(b)(2), §494.62(b)(3).	<p>(b) Policies and procedures. The [facilities] must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually.] At a minimum, the policies and procedures must address the following:]</p> <p>(4) A means to shelter in place for patients, staff, and volunteers who remain in the [facility].</p> <p>*[For Inpatient Hospices at §418.113(b):] Policies and procedures.</p> <p>(6) The following are additional requirements for hospice-operated inpatient care facilities only. The policies and procedures must address the following:</p> <p>(i) A means to shelter in place for patients, hospice employees who remain in the hospice.</p>	<p>Emergency plans must include a means for sheltering all patients, staff, and volunteers who remain in the facility in the event that an evacuation cannot be executed. . In certain disaster situations (such as tornadoes) , sheltering in place may be more appropriate as opposed to evacuation and would require a facility to have a means to shelter in place for such emergencies. Therefore, facilities are required to have policies and procedures for sheltering in place which align with the facility’s risk assessment.</p> <p>Facilities are expected to include in their policies and procedures the criteria for determining which patients and staff that would be sheltered in place. When developing policies and procedures for sheltering in place, facilities should consider the ability of their building(s) to survive a disaster and what proactive steps they could take prior to an emergency to facilitate sheltering in place or transferring of patients to alternate settings if their facilities were affected by the emergency. For example, if it is dangerous to evacuate or the emergency affects available sites for transfer or discharge, then the patients would remain in the facility until it was safe to effectuate transfers or discharges. The plan should take into account the appropriate facilities in the community to which patients could be transferred in the event of an emergency. Facilities must determine their policies based on the type of emergency and the types of patients, staff, volunteers and visitors that may be present during an emergency. Based on its emergency plan, a facility could decide to have various approaches to sheltering some or all of its patients and staff.</p> <p>Survey Procedures</p> <ul style="list-style-type: none"> • Verify the emergency plan includes policies and procedures for how it will provide a means to shelter in place for patients, staff and volunteers who remain in a facility. • Review the policies and procedures for sheltering in place and evaluate if they aligned with the facility’s emergency plan and risk assessment. 0032 Primary/Alternate Means for Communication §403.748(c)(3), §416.54(c)(3),	[(c) The [facility] must develop and maintain an emergency preparedness communication plan that complies with Federal, State and local laws and must be reviewed and updated at least annually.] The communication plan must include all of the following: (3) Primary and alternate means for communicating with the following:	Facilities are required to have primary and alternate means of communicating with staff, Federal, State, tribal, regional, and local emergency management agencies. Facilities have the discretion to utilize alternate communication systems that best meets their needs. However, it is expected that facilities would consider pagers, cellular telephones, radio transceivers (that is, walkie-talkies), and various other radio devices such as the NOAA Weather Radio and	Y	Y	Y	Y	Y	Y	N	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RNHCI	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FQHC	ESRD
§403.748(c)(4)-(6), §416.54(c)(4)-(6), §418.113(c)(4)-(6), §441.184(c)(4)-(6), §460.84(c)(4)-(6), §441.184(c)(4)-(6), §460.84(c)(4)-(6), §482.15(c)(4)-(6), §483.73(c)(4)-(6), §483.475(c)(4)-(6), §484.22(c)(4)-(5), §485.68(c)(4), §485.625(c)(4)-(6), §485.727(c)(4), §485.920(c)(4)-(6), §491.12(c)(4), §494.62(c)(4)-(6).	<p>updated at least annually.] The communication plan must include all of the following:</p> <p>(4) A method for sharing information and medical documentation for patients under the [facility's] care, as necessary, with other health providers to maintain the continuity of care.</p> <p>(5) A means, in the event of an evacuation, to release patient information as permitted under 45 CFR 164.510(b)(1)(ii). [This provision is not required for HHAs under §484.22(c), CORFs under §485.68(c), and RHCs/FQHCs under §491.12(c).]</p> <p>(6) [(4) or (5)]A means of providing information about the general condition and location of patients under the [facility's] care as permitted under 45 CFR 164.510(b)(4).</p> <p>*[For RNHCIs at §403.748(c):] (4) A method for sharing information and care documentation for patients under the RNHCI's care, as necessary, with care providers to maintain the continuity of care, based on the written election statement made by the patient or his or her legal representative. Note: In the event of an evacuation, a means to release patient information as permitted under HIPAA is not required for HHAs under §484.22(c), CORFs under §485.68(c), and RHCs/FQHCs under §491.12(c).</p>	<p>that information necessary to provide patient care is sent with an evacuated patient to the next care provider and would also be readily available for patients being sheltered in place. While the regulation does not specify timelines for delivering patient care information, facilities are expected to provide patient care information to receiving facilities during an evacuation, within a timeframe that allows for effective patient treatment and continuity of care. Facilities should not delay patient transfers during an emergency to assemble all patient reports, tests, etc. to send with the patient. Facilities should send all necessary patient information that is readily available and should include at least, patient name, age, DOB, allergies, current medications, medical diagnoses, current reason for admission (if inpatient), blood type, advance directives and next of kin/emergency contacts. There is no specified means (such as paper or electronic) for how facilities are to share the required information.</p> <p>Facilities (with the exception of HHAs, RHCs, FQHCs, and CORFs) are also required to have a means, in the event of an evacuation, to release patient information as permitted under 45 CFR 164.510 and a means of providing information about the general condition and location of patients under the facility's care as permitted under 45 CFR 164.510(b)(4). Thus, facilities must have a communication system in place capable of generating timely, accurate information that could be disseminated, as permitted under 45 CFR 164.510(b)(4), to family members and others. Facilities have the flexibility to develop and maintain their own system in a manner that best meets its needs.</p> <p>HIPAA requirements are not suspended during a national or public health emergency. However, the HIPAA Privacy Rule specifically permits certain uses and disclosures of protected health information in emergency circumstances and for disaster relief purposes. Section 164.510 "Uses and disclosures requiring an opportunity for the individual to agree to or to object," is part of the "Standards for Privacy of Individually Identifiable Health Information," commonly known as "The Privacy Rule." HIPAA Privacy Regulations at 45 CFR 164.510(b)(4), "Use and disclosures for disaster relief purposes," establishes requirements for disclosing patient information to a public or private entity authorized by law or by its charter to assist in disaster relief efforts for purposes of notifying family members, personal representatives, or certain others of the patient's location or general condition.</p>

The ASC must do all of the following:</p> <p>(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing on-site services under arrangement, and volunteers, consistent with their expected roles.</p> <p>(ii) Provide emergency preparedness training at least annually.</p> <p>(iii) Maintain documentation of the training.</p> <p>(iv) Demonstrate staff knowledge of emergency procedures.</p> <p>*[For Hospices at §418.113(d):] (1) Training. The hospice must do all of the following:</p> <p>(i) Initial training in emergency preparedness policies and procedures to all new and existing hospice employees, and individuals providing services under arrangement, consistent with their expected roles.</p> <p>(ii) Demonstrate staff knowledge of emergency procedures.</p> <p>(iii) Provide emergency preparedness training at least annually.</p> <p>(iv) Periodically review and rehearse its emergency preparedness plan with hospice employees (including nonemployee staff), with special emphasis placed on carrying out the procedures necessary to protect patients and others.</p> <p>*[For PRTFs at §441.184(d):] (1) Training program. The PRTF must do all of the following:</p> <p>(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.</p> <p>(ii) After initial training, provide emergency preparedness training at least annually.</p> <p>(iii) Demonstrate staff knowledge of emergency procedures.</p> <p>(iv) Maintain documentation of all emergency preparedness training.</p> <p>*[For PACE at §460.84(d):] (1) The PACE organization must do all of the following:</p> <p>(i) Initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing on-site services under arrangement, contractors, participants, and volunteers, consistent with their expected roles.</p> <p>(ii) Provide emergency preparedness training at least annually.</p> <p>(iii) Demonstrate staff knowledge of emergency procedures, including informing participants of what to do, where to go, and whom to contact in case of an emergency.</p> <p>(iv) Maintain documentation of all training.</p>	<p>providing services under arrangement, and volunteers. This includes individuals who provide services on a per diem basis such as agency nursing staff and any other individuals who provide services on an intermittent basis and would be expected to assist during an emergency.</p> <p>PACE organizations and CAHs have additional requirements. PACE organizations must also provide initial training to contractors and PACE participants. CAHs must also include initial training on the following: prompt reporting and extinguishing of fires; protection; and where necessary, evacuation of patients, personnel, and guests, fire prevention, and cooperation with firefighting and disaster authorities.</p> <p>Facilities should provide initial emergency training during orientation (or shortly thereafter) to ensure initial training is not delayed. With the exception of CORFs which must complete initial training within the first two weeks of employment, we recommend initial training be completed by the time the staff has completed the facility's new hire orientation program. Additionally, in the case of facilities with multiple locations, such as multi-campus hospitals, staff, individuals providing services under arrangement, or volunteers should be provided initial training at their specific location and when they are assigned to a new location.</p> <p>Facilities have the flexibility to determine the focus of their annual training, as long as it aligns with the emergency plan and risk assessment. Ideally, annual training should be modified each year, incorporating any lessons learned from the most recent exercises, real-life emergencies that occurred in the last year and during the annual review of the facility's emergency program. For example, annual training could include training staff on new evacuation procedures that were identified as a best practice and documented in the facility "AAR) during the last emergency drill and were incorporated into the emergency plan during the program's annual review.</p> <p>While facilities are required to provide annual training to all staff, it is up to the facility to decide what level of training each staff member will be required to complete each year based on an individual's involvement or expected role during an emergency. There may be core topics that apply to all staff, while certain clinical staff may require additional topics. For example, dietary staff who prepare meals may not need to complete annual training that is focused on patient evacuation procedures. Instead, the facility may provide</p>

	<p>*[For CORFs at §485.68(d):](1) Training. The CORF must do all of the following:</p> <p>(i) Provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.</p> <p>(ii) Provide emergency preparedness training at least annually.</p> <p>(iii) Maintain documentation of the training.</p> <p>(iv) Demonstrate staff knowledge of emergency procedures. All new personnel must be oriented and assigned specific responsibilities regarding the CORF's emergency plan within 2 weeks of their first workday. The training program must include instruction in the location and use of alarm systems and signals and firefighting equipment.</p> <p>*[For CAHs at §485.625(d):] (1) Training program. The CAH must do all of the following:</p> <p>(i) Initial training in emergency preparedness policies and procedures, including prompt reporting and extinguishing of fires, protection, and where necessary, evacuation of patients, personnel, and guests, fire prevention, and cooperation with firefighting and disaster authorities, to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.</p> <p>(ii) Provide emergency preparedness training at least annually.</p> <p>(iii) Maintain documentation of the training.</p> <p>(iv) Demonstrate staff knowledge of emergency procedures.</p> <p>*[For CMHCs at §485.920(d):] (1) Training. The CMHC must provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles, and maintain documentation of the training. The CMHC must demonstrate staff knowledge of emergency procedures. Thereafter, the CMHC must provide emergency preparedness training at least annually.</p>	<p>training that focuses on the proper preparation and storage of food in an emergency. In addition, depending on specific staff duties during an emergency, a facility may determine that documented external training is sufficient to meet some or all of the facility's annual training requirements. For example, staff who work with radiopharmaceuticals may attend external training that teach staff how to handle radiopharmaceutical emergencies. It is up to the facility to decide if the external training meets the facility's requirements.</p> <p>Facilities must maintain documentation of the annual training for all staff. The documentation must include the specific training completed as well as the methods used for demonstrating knowledge of the training program. Facilities have flexibility in ways to demonstrate staff knowledge of emergency procedures. The method chosen is likely based on the training delivery method. For example: computer-based or printed self-learning packets may contain a test to demonstrate knowledge. If facilities choose instructor-led training, a question and answer session could follow the training. Regardless of the method, facilities must maintain documentation that training was completed and that staff are knowledgeable of emergency procedures.</p> <p>Survey Procedures</p> <ul style="list-style-type: none"> • Ask for copies of the facility's initial emergency preparedness training and annual emergency preparedness training offerings. • Interview various staff and ask questions regarding the facility's initial and annual training course, to verify staff knowledge of emergency procedures. • Review a sample of staff training files to verify staff have received initial and annual emergency preparedness training. 																	
0038 ESRD EP Training Program §494.62(d)(1).	<p>§494.62(d)(1): Condition for Coverage:</p> <p>(d)(1) Training program. The dialysis facility must do all of the following:</p> <p>(i) Provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles.</p> <p>(ii) Provide emergency preparedness training at least annually. Staff training must:</p> <p>(iii) Demonstrate staff knowledge of emergency procedures, including informing patients of—</p> <p>(A) What to do;</p> <p>(B) Where to go, including instructions for occasions when the geographic area of the dialysis facility must be evacuated;</p> <p>(C) Whom to contact if an emergency occurs while the patient is not in the dialysis facility. This contact information must include an alternate</p>	<p>Interpretive Guidelines for §494.62(d)(1).</p> <p>The ESRD facility is required to train new and existing staff on their emergency preparedness policies and procedures on an annual basis. Additionally, individuals providing services under arrangement and volunteers are required to undergo the training as applicable to their roles and responsibilities within the facility.</p> <p>Many large ESRD Networks already implement trainings for staff regarding evacuation procedures of the facilities. Through this requirement, all facilities are required to demonstrate upon survey that that staff know the current evacuation plans, alternate locations as well as their emergency contacts. Among the training, ESRD staff must be able to demonstrate knowledge on procedures for informing patients on how to disconnect themselves from a dialysis machine in the event of a disaster.</p>	N	N	N	N	N	N	N	N	N	N	N	N	N	N	N	N	Y

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RNCHII	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FOHC	ESRD
	<p>emergency phone number for the facility for instances when the dialysis facility is unable to receive phone calls due to an emergency situation (unless the facility has the ability to forward calls to a working phone number under such emergency conditions); and (D) How to disconnect themselves from the dialysis machine if an emergency occurs. (iv) Demonstrate that, at a minimum, its patient care staff maintains current CPR certification; and (v) Properly train its nursing staff in the use of emergency equipment and emergency drugs. (vi) Maintain documentation of the training.</p>	<p>The ESRD facility must train staff on informing patients on whom to contact if the facility is closed and cannot provide treatment due to an emergency situation and how they can locate an alternate dialysis facility (e.g. Kidney Community Emergency Response Program (KCER)) or hospital that can assist them.</p> <p>The ESRD facilities are expected to rearrange patient appointments if a disaster or emergency is forecasted through emergency notification channels, such as national weather forecasts. For instance, for inclement weather such as a snow storm which could cause community-wide closures and dangerous road conditions, we would expect the facility to make the appropriate arrangements for patients to receive their dialysis or be transferred into an inpatient setting to be provided with the appropriate care. Therefore, ESRD facilities may gear their training and testing program to include evacuation procedures in the event the facility is unable to close prior to an emergency.</p> <p>All ESRD facility patient care staff are required to maintain current CPR certifications and all nursing staff are required to be properly trained in clinical emergency protocols that include the use of emergency equipment and emergency drugs. The training and CPR certifications must be documented and maintained on file.</p> <p>Survey Procedures</p> <ul style="list-style-type: none"> • Verify the facility has an emergency preparedness training program and that it is updated annually. • Interview staff and ask them to describe the evacuation procedures and plan. • Verify current copies of CPR certifications for all patient care staff are on file. 																	
<p>0039 EP Testing Requirements §416.54(d)(2), §418.113(d)(2), §441.184(d)(2), §460.84(d)(2), §482.15(d)(2), §483.73(d)(2), §483.475(d)(2), §484.22(d)(2), §485.68(d)(2), §485.625(d)(2), §485.727(d)(2), §485.920(d)(2), §491.12(d)(2), §494.62(d)(2).</p>	<p>(2) Testing. The [facility, except for LTC facilities, RNHCIs and OPOs] must conduct exercises to test the emergency plan at least annually. The [facility, except for RNHCIs and OPOs] must do all of the following: *[For LTC Facilities at §483.73(d):] (2) Testing. The LTC facility must conduct exercises to test the emergency plan at least annually, including unannounced staff drills using the emergency procedures. The LTC facility must do all of the following:] (i) Participate in a full-scale exercise that is community-based or when a community-based exercise is not accessible, an individual, facility-based. If the [facility] experiences an actual natural or man-made emergency that requires activation of the emergency plan, the [facility] is exempt from engaging in a community-based or individual, facility-based full-scale exercise for 1 year following the onset of the actual event. (ii) Conduct an additional exercise that may include, but is not limited to the following: (A) A second full-scale exercise that is community-based or individual, facility-based.</p>	<p>Facilities must on an annual basis conduct exercises to test the emergency plan, which for LTC facilities also includes unannounced staff drills using the emergency procedures. Specifically, facilities are required to conduct a tabletop exercise and participate in a full-scale community-based exercise or conduct an individual facility exercise if a community-based exercise is not available. As the term full-scale exercise may vary by sector, facilities are not required to conduct a full-scale exercise as defined by FEMA or DHS’s Homeland Security Exercise and Evaluation Program (HSEEP). For the purposes of this requirement, a full scale exercise is defined and accepted as any operations-based exercise (drill, functional, or full-scale exercise) that assesses a facility’s functional capabilities by simulating a response to an emergency that would impact the facility’s operations and their given community. There is also definition for “community” as it is subject to variation based on geographic setting, (e.g. rural, suburban, urban, etc.), state and local agency roles and responsibilities, types of providers in a given area in addition to other factors. In doing so, facilities have the flexibility to participate in and conduct exercises that more realistically reflect the risks and composition of their communities. Facilities are expected to consider their physical location, agency and other facility responsibilities and needs of the community when planning or participating in their exercises. The</p>	Y	Y	Y	Y	Y	N	Y	Y	Y	Y	Y	Y	Y	N	Y	Y	Y

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RNHCI	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FOHC	ESRD
	<p>(B) A tabletop exercise that includes a group discussion led by a facilitator, using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.</p> <p>(iii) Analyze the [facility's] response to and maintain documentation of all drills, tabletop exercises, and emergency events, and revise the [facility's] emergency plan, as needed.</p> <p>*[For RNHCIs at §403.748 and OPOs at §486.360] (d)(2) Testing. The [RNHCI and OPO] must conduct exercises to test the emergency plan. The [RNHCI and OPO] must do the following:</p> <p>(i) Conduct a paper-based, tabletop exercise at least annually. A tabletop exercise is a group discussion led by a facilitator, using a narrated, clinically relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.</p> <p>(ii) Analyze the [RNHCI's and OPO's] response to and maintain documentation of all tabletop exercises, and emergency events, and revise the [RNHCI's and OPO's] emergency plan, as needed.</p>	<p>term could, however, mean entities within a state or multi-state region.</p> <p>In many areas of the country, State and local agencies (emergency management agencies and health departments) and some regional entities, such as healthcare coalitions may conduct an annual full-scale, community-based exercise in an effort to more broadly assess community-wide emergency planning, potential gaps, and the integration of response capabilities in an emergency. Facilities should actively engage these entities to identify potential opportunities, as appropriate, as they offer the facility the opportunity to not only assess their emergency plan but also better understand how they can contribute to, coordinate with, and integrate into the broader community's response during an emergency. They also provide a collective forum for assessing their communications plans to ensure they have the appropriate contacts and understand how best to engage and communicate with their state and local public health and emergency management agencies and other relevant partners, such as a local healthcare coalition, during an emergency.</p> <p>Facilities are expected to contact their local and state agencies and healthcare coalitions, where appropriate, to determine if an opportunity exists and determine if their participation would fulfill this requirement. In doing so, they are expected to document the date, the personnel and the agency or healthcare coalition that they contacted. It is also important to note that agencies and or healthcare coalitions conducting these exercises will not have the resources to fulfill individual facility requirements and thus will only serve as a conduit for broader community engagement and coordination prior to, during and after the full-scale community-based exercise. Facilities are responsible for resourcing their participation and ensuring that all requisite documentation is developed and available to demonstrate their compliance with this requirement.</p> <p>Facilities are encouraged to engage with their area Health Care Coalitions (HCC) (partnerships between healthcare, public health, EMS, and emergency management) to explore integrated opportunities. Health Care Coalitions (HCCs) are groups of individual health care and response organizations who collaborate to ensure each member has what it needs to respond to emergencies and planned events. HCCs plan and conduct coordinated exercises to assess the health care delivery systems readiness. There is value in participating in HCCs for participating in</p>																	

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RNCHII	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FQHC	ESRD
		<p>strategic planning, information sharing and resource coordination. HCC's do not coordinate individual facility exercises, but rather serve as a conduit to provide an opportunity for other provider types to participate in an exercise. HCCs should communicate exercise plans with local and state emergency preparedness agencies and HCCs will benefit the entire community's preparedness. In addition, CMS does not regulate state and local government disaster planning agencies. It is the sole responsibility of the facility to be in compliance.</p> <p>Facilities that are not able to identify a full-scale community-based exercise, can instead fulfill this part of their requirement by either conducting an individual facility-based exercise, documenting an emergency that required them to fully activate their emergency plan, or by conducting a smaller community-based exercise with other nearby facilities. Facilities that elect to develop a small community-based exercise have the opportunity to not only assess their own emergency preparedness plans but also better understand the whole community's needs, identify critical interdependencies and or gaps and potentially minimize the financial impact of this requirement. For example, a LTC facility, a hospital, an ESRD facility, and a home health agency, all within a given area, could conduct a small community-based exercise to assess their individual facility plans and identify interdependencies that may impact facility evacuations and or address potential surge scenarios due to a prolonged disruption in dialysis and home health care services. Those that elect to conduct a community-based exercise should make an effort to contact their local/state emergency officials and healthcare coalitions, where appropriate, and offer them the opportunity to attend as they can provide valuable insight into the broader emergency planning and response activities in their given area.</p> <p>Facilities that conduct an individual facility-based exercise will need to demonstrate how it addresses any risk(s) identified in its risk assessment. For example, an inpatient facility might test their policies and procedures for a flood that may require the evacuation of patients to an external site or to an internal safe "shelter-in-place" location (e.g. foyer, cafeteria, etc.) and include requirements for patients with access and functional needs and potential dependencies on life-saving electricity-dependent medical equipment. An outpatient facility, such as a home health provider, might test its policies and procedures for a flood that may require it to rapidly locate its on-duty staff, assess the acuity of its patients to</p>																	

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RNCHII	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FOHC	ESRD
		<p>determine those that may be able to shelter-in-place or require hospital admission, communicate potential evacuation needs to local agencies, and provide medical information to support the patient's continuity of care.</p> <p>Each facility is responsible for documenting their compliance and ensuring that this information is available for review at any time for a period of no less than three (3) years. Facilities should also document the lessons learned following their tabletop and full-scale exercises and real-life emergencies and demonstrate that they have incorporated any necessary improvements in their emergency preparedness program. Facilities may complete an after action review process to help them develop an actionable after action report (AAR). The process includes a roundtable discussion that includes leadership, department leads and critical staff who can identify and document lessons learned and necessary improvements in an official AAR. The AAR, at a minimum, should determine 1) what was supposed to happen; 2) what occurred; 3) what went well; 4) what the facility can do differently or improve upon; and 5) a plan with timelines for incorporating necessary improvement. Lastly, facilities that are a part of a healthcare system, can elect to participate in their system's integrated and unified emergency preparedness program and exercises. However, those that do will still be responsible for documenting and demonstrating their individual facility's compliance with the exercise and training requirements.</p> <p>Finally, an actual emergency event or response of sufficient magnitude that requires activation of the relevant emergency plans meets the annual exercise requirements and exempts the facility for engaging in the required exercises for one year following the actual event; and facility's must be able to demonstrate this through written documentation.</p>																	
0040 ESRD Patient Orientation Training §494.62(d)(3).	§494.62(d)(3) Condition for Coverage: Patient orientation: Emergency preparedness patient training. The dialysis facility must provide appropriate orientation and training to patients, including the areas specified in paragraph (d)(1) of this section.	<p>ESRD facilities are required to implement an orientation and training program which educates patients on the emergency preparedness policies and procedures of the facility, including the requirements of the ESRD facility's emergency preparedness training program under §494.62(d)(1). For instance, the orientation and training program should include how patients would be notified of an emergency; what particular procedures they are expected to follow; communication protocols for contacting the ESRD facility and identifying an alternate location for their treatment in the event of a facility closure as well as shelter-in place.</p> <p>Additionally, patients should be oriented to how they would evacuate the facility (if required) and the location of potential transfer sites or services. For instance, if an emergency situation required evacuation during a dialysis treatment, the facility must train the patient on how to safely disconnect from the machine. Additionally, in this example, if the patient was disconnected, the patient should be informed that he or</p>	N	N	N	N	N	N	N	N	N	N	N	N	N	N	N	N	Y

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RNCHII	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FOHC	ESRD
		<p>she will be transferred to another facility or hospital to complete the dialysis (if required).</p> <p>Ultimately, the emergency preparedness orientation and training for patients should adequately address scenarios which were identified in the ESRD facility's risk assessment and address specific actions required for the emergency situation. The orientation and training program is intended to ensure patients are informed, ready to assist themselves, and are aware of the facility procedures and resources (e.g. KCER) that can provide up to date information during and after an emergency.</p> <p>Survey Procedures</p> <ul style="list-style-type: none"> • Verify the ESRD facility has implemented their policies and procedures and are actively providing orientation and training of all their patients for the emergency preparedness program. • Interview a patient and ask them to describe their orientation to the facility in terms of emergency protocols and procedures. 																	
0041 Hospital CAH and LTC Emergency Power 482.15(e), §485.625(e), §483.73(e).	<p>§482.15(e) Condition for Participation:</p> <p>(e) Emergency and standby power systems. The hospital must implement emergency and standby power systems based on the emergency plan set forth in paragraph (a) of this section and in the policies and procedures plan set forth in paragraphs (b)(1)(i) and (ii) of this section.</p> <p>§483.73(e), §485.625(e)</p> <p>(e) Emergency and standby power systems. The [LTC facility and the CAH] must implement emergency and standby power systems based on the emergency plan set forth in paragraph (a) of this section.</p> <p>§482.15(e)(1), §483.73(e)(1), §485.625(e)(1)</p> <p>Emergency generator location. The generator must be located in accordance with the location requirements found in the Health Care Facilities Code (NFPA 99 and Tentative Interim Amendments TIA 12–2, TIA 12–3, TIA 12–4, TIA 12–5, and TIA 12–6), Life Safety Code (NFPA 101 and Tentative Interim Amendments TIA 12–1, TIA 12–2, TIA 12–3, and TIA 12–4), and NFPA 110, when a new structure is built or when an existing structure or building is renovated.</p> <p>482.15(e)(2), §483.73(e)(2), §485.625(e)(2)</p> <p>Emergency generator inspection and testing. The [hospital, CAH and LTC facility] must implement the emergency power system inspection, testing, and maintenance requirements found in the Health Care Facilities Code, NFPA 110, and Life Safety Code.</p> <p>482.15(e)(3), §483.73(e)(3), §485.625(e)(3)</p>	<p>Note: This provision for hospitals, CAHs and LTC facilities requires these facility types to base their emergency power and stand-by systems on their emergency plan, risk assessment and policies and procedures. The determination for a generator should be made through the development of the facility's risk assessment and policies and procedures. If these facilities determine that no generator is required to meet the emergency power and stand-by systems requirements, then §§482.15(e)(1) and (2), §483.73(e)(1) and (2), §485.625(e)(1) and (2), would not apply.</p> <p>However, these facility types are must continue to meet the existing provisions and requirements for their provider/supplier types under physical environment CoPs or any existing LSC guidance.</p> <p><u>Emergency and standby power systems</u></p> <p>CMS requires Hospitals, CAHs and LTC facilities to comply with the 2012 edition of the National Fire Protection Association (NFPA) 101 – Life Safety Code (LSC) and the 2012 edition of the NFPA 99 – Health Care Facilities Code in accordance with the Final Rule (CMS–3277–F). NFPA 99 requires Hospitals, CAHs and certain LTC facilities to install, maintain, inspect and test an Essential Electric System (EES) in areas of a building where the failure of equipment or systems is likely to cause the injury or death of patients or caregivers. An EES is a system which includes an alternate source of power, distribution system, and associated equipment that is designed to ensure continuity of electricity to elected areas and functions during the interruption of normal electrical service. The EES alternate source of power for these facility types is typically a generator. (Note: LTC facilities are also expected to meet the requirements under Life Safety Code and NFPA 99 as outlined within the LTC Appendix of the SOM). In</p>	N	N	N	N	N	Y	N	Y	N	N	N	Y	N	N	N	N	N

You may inspect a copy at the CMS Information Resource Center, 7500 Security Boulevard, Baltimore, MD or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.</p> <p>If any changes in this edition of the Code are incorporated by reference, CMS will publish a document in the Federal Register to announce the changes.</p> <p>(1) National Fire Protection Association, 1 Batterymarch Park, Quincy, MA 02169, www.nfpa.org, 1.617.770.3000.</p> <p>(i) NFPA 99, Health Care Facilities Code, 2012 edition, issued August 11, 2011.</p> <p>(ii) Technical interim amendment (TIA) 12-2 to NFPA 99, issued August 11, 2011.</p> <p>(iii) TIA 12-3 to NFPA 99, issued August 9, 2012.</p> <p>(iv) TIA 12-4 to NFPA 99, issued March 7, 2013.</p> <p>(v) TIA 12-5 to NFPA 99, issued August 1, 2013.</p> <p>(vi) TIA 12-6 to NFPA 99, issued March 3, 2014.</p> <p>(vii) NFPA 101, Life Safety Code, 2012 edition, issued August 11, 2011.</p> <p>(viii) TIA 12-1 to NFPA 101, issued August 11, 2011.</p> <p>(ix) TIA 12-2 to NFPA 101, issued October 30, 2012.</p> <p>(x) TIA 12-3 to NFPA 101, issued October 22, 2013.</p>	<p>addition, NFPA 99 identifies the 2010 edition of NFPA 110 – Standard for Emergency and Standby Power Systems as a mandatory reference, which addresses the performance requirements for emergency and standby power systems and includes installation, maintenance, operation, and testing requirements.</p> <p>In addition to the LSC, NFPA 99 and NFPA 110 requirements, the Emergency Preparedness regulation requires all Hospitals, CAHs, and LTC facilities to implement emergency and standby power systems based upon a facility’s established emergency plan, policies, and procedures. Emergency preparedness policies and procedures (substandard (b) of the emergency preparedness requirements) are required to address the subsistence needs of staff and residents, whether the facility decides to evacuate or shelter in place. Subsistence needs include, but are not limited to, food, water, medical, and pharmaceutical supplies, and alternate sources of energy to maintain: temperatures to protect patient/resident health and safety and sanitary storage of provisions; emergency lighting; fire detection, extinguishing, and alarm systems; and sewage and waste disposal.</p> <p>NFPA 99 contains emergency power requirements for emergency lighting, fire detection systems, extinguishing systems, and alarm systems. But, NFPA 99 does not specify emergency power requirements for maintaining supplies, and facility temperature requirements are limited to heating equipment for operating, delivery, labor, recovery, intensive care, coronary care, nurseries, infection/isolation rooms, emergency treatment spaces, and general patient/resident rooms. In addition, NFPA 99 does not require heating in general patient rooms during the disruption of normal power where the outside design temperature is higher than 20 degrees Fahrenheit or where a selected room(s) is provided for the needs of all patients (where patients would be internally relocated), then only that room(s) needs to be heated. Therefore, EES in Hospitals, CAHs and LTC facilities should include consideration for design to accommodate any additional electrical loads the facility determines to be necessary to meet all subsistence needs required by emergency preparedness plans, policies and procedures, unless the facility’s emergency plans, policies and procedures required under paragraph (a) and paragraph (b)(1)(i) and (ii) of this section determine that the hospital, CAH or LTC facility will relocate patients internally or evacuate in the event of an emergency. Facilities may plan to evacuate all patients, or choose to relocate internally only</p>																	

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RNCHII	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FOHC	ESRD
	<p>(xi) TIA 12–4 to NFPA 101, issued October 22, 2013.</p> <p>(xiii) NFPA 110, Standard for Emergency and Standby Power Systems, 2010 edition, including TIAs to chapter 7, issued August 6, 2009.</p>	<p>patients located in certain locations of the facility based on the ability to meet emergency power requirements in certain locations. For example, a hospital that has the ability to maintain temperature requirements in 50 percent of the inpatient locations during a power outage, may develop an emergency plan that includes bringing in alternate power, heating and/or cooling capabilities, and the partial relocation or evacuation of patients during a power outage instead of installing additional power sources to maintain temperatures in all inpatient locations. Or a LTC facility may decide to relocate residents to a part of the facility, such as a dining or activities room, where the facility can maintain the proper temperature requirements rather than the maintaining temperature within the entire facility. It is up to each facility to make emergency power system decisions based on its risk assessment and emergency plan.</p> <p><u>Emergency generator location</u></p> <p>NFPA 110 contains minimum requirements and considerations for the installation and environmental conditions that may have an effect on Emergency Power Supply System (EPSS) equipment, including, building type, classification of occupancy, hazard of contents, and geographic location. NFPA 110 requires that EPSS equipment, including generators, to be designed and located to minimize damage (e.g., flooding). NFPA 110 requires emergency power supply systems to be permanently attached, therefore portable and mobile generators would not be permitted as an option to provide or supplement emergency power to Hospitals, CAHs or LTC facilities.</p> <p>Under emergency preparedness, the regulations require that the generator and its associated equipment be located in accordance with the LSC, NFPA 99, and NFPA 110 when a new structure is built or an existing structure or building is renovated. Therefore, new structures or building renovations that occur after November 15, 2016, the effective date of the Emergency Preparedness Final Rule must consider NFPA requirements to ensure that the EPSS equipment is in a location to minimize damage.</p> <p><u>Emergency generator inspection and testing</u></p> <p>NFPA 110 contains routine maintenance and operational testing requirements for emergency and standby power systems, including generators. Emergency generators required by NFPA 99 and the Emergency Preparedness Final Rule must be maintained and tested in accordance with NFPA 110 requirements, which are based</p>																	

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RNCHI	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FOHC	ESRD
		<p>on manufacture recommendations, instruction manuals, and the minimum requirements of NFPA 110, Chapter 8.</p> <p><u>Emergency generator fuel</u></p> <p>NFPA 110 permits fuel sources for generators to be liquid petroleum products (e.g., gas, diesel), liquefied petroleum gas (e.g., propane) and natural or synthetic gas (e.g., natural gas). Generators required by NFPA 99 are designated by Class, which defines the minimum time, in hours, that an EES is designed to operate at its rated load without having to be refueled. Generators required by NFPA 99 for Hospitals, CAHs and LTC facilities are designated Class X, which defines the minimum run time as being “other time, in hours, as required by application, code or user.” However, NFPA 110 does require facilities considering seismic events to maintain a minimum 96 hour fuel supply. NFPA 110 also requires that generator installations in locations where the probability of interruption of off-site (e.g., natural gas) fuel supplies is high to maintain onsite storage of an alternate fuel source sufficient to allow full output of the ESS for the specified class.</p> <p>The Emergency Preparedness Final Rule requires Hospitals, CAHs and LTC facilities that maintain onsite fuel sources (e.g., gas, diesel, propane) to have a plan to keep the EES operational for the du</p>																	
0042 Integrated Health Systems §416.54(e), §418.113(e), §441.184(e), §460.84(e), §482.15(f), §483.73(f), §483.475(e), §484.22(e), §485.68(e), §485.625(f), §485.727(e), §485.920(e), §486.360(f), §491.12(e), §494.62(e).	<p>(e) [or (f)]Integrated healthcare systems. If a [facility] is part of a healthcare system consisting of multiple separately certified healthcare facilities that elects to have a unified and integrated emergency preparedness program, the [facility] may choose to participate in the healthcare system's coordinated emergency preparedness program. If elected, the unified and integrated emergency preparedness program must- [do all of the following:]</p> <p>(1) Demonstrate that each separately certified facility within the system actively participated in the development of the unified and integrated emergency preparedness program.</p> <p>(2) Be developed and maintained in a manner that takes into account each separately certified facility's unique circumstances, patient populations, and services offered.</p> <p>(3) Demonstrate that each separately certified facility is capable of actively using the unified and integrated emergency preparedness program and is in compliance [with the program].</p>	<p>Healthcare systems that include multiple facilities that are each separately certified as a Medicare-participating provider or supplier have the option of developing a unified and integrated emergency preparedness program that includes all of the facilities within the healthcare system instead of each facility developing a separate emergency preparedness program. If an integrated healthcare system chooses this option, each certified facility in the system may elect to participate in the system's unified and integrated emergency program or develop its own separate emergency preparedness program. It is important to understand that healthcare systems are not required to develop a unified and integrated emergency program. Rather it is a permissible option. In addition, the separately certified facilities within the healthcare system are not required to participate in the unified and integrated emergency preparedness program. It is simply an option for each facility. If this option is taken, the healthcare system's unified emergency preparedness program should be updated each time a facility enters or leaves the healthcare system's program.</p> <p>If a healthcare system elects to have a unified emergency preparedness program, the integrated program must demonstrate</p>	Y	Y	Y	Y	Y	Y	N	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RNCHII	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FOHC	ESRD
	<p>(4) Include a unified and integrated emergency plan that meets the requirements of paragraphs (a)(2), (3), and (4) of this section. The unified and integrated emergency plan must also be based on and include the following:</p> <p>(i) A documented community-based risk assessment, utilizing an all-hazards approach.</p> <p>(ii) A documented individual facility-based risk assessment for each separately certified facility within the health system, utilizing an all-hazards approach.</p> <p>(5) Include integrated policies and procedures that meet the requirements set forth in paragraph (b) of this section, a coordinated communication plan, and training and testing programs that meet the requirements of paragraphs (c) and (d) of this section, respectively.</p> <p>Interpretive Guidelines Applies to: §482.15(f), §416.54(e), §418.113(e), §441.184(e), §460.84(e), §482.78(f), §483.73(f), §483.475(e), §484.22(e), §485.68(e), §485.625(f), §485.727(e), §485.920(e), §486.360(f), §491.12(e), §494.62(e).</p>	<p>that each separately certified facility within the system that elected to participate in the system's integrated program actively participated in the development of the program. Therefore, each facility should designate personnel who will collaborate with the healthcare system to develop the plan. The unified and integrated plan should include documentation that verifies each facility participated in the development of the plan. This could include the names of personnel at each facility who assisted in the development of the plan and the minutes from planning meetings. All components of the emergency preparedness program that are required to be reviewed and updated at least annually must include all participating facilities. Again, each facility must be able to prove that it was involved in the annual reviews and updates of the program. The healthcare system and each facility must document each facility's active involvement with the reviews and updates, as applicable.</p> <p>A unified program must be developed and maintained in a manner that takes into account the unique circumstances, patient populations, and services offered at each facility participating in the integrated program. For example, for a unified plan covering both a hospital and a LTC facility, the emergency plan must account for the residents in the LTC facility as well as those patients within a hospital, while taking into consideration the difference in services that are provided at a LTC facility and a hospital. The unique circumstances that should be addressed at each facility would include anything that would impact operations during an emergency, such as the location of the facility, resources such as the availability of staffing, medical supplies, subsistence, patients' and residents' varying acuity and mobility at the different types of facilities in a unified healthcare system, etc.</p> <p>Each separately certified facility must be capable of demonstrating during a survey that it can effectively implement the emergency preparedness program and demonstrate compliance with all emergency preparedness requirements at the individual facility level. Compliance with the emergency preparedness requirements is the individual responsibility of each separately certified facility.</p> <p>The unified emergency preparedness program must include a documented community-based risk assessment and an individual facility-based risk assessment for each separately certified facility within the health system, utilizing an all-hazards approach. This is especially important if the facilities in a healthcare system are</p>																	

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RNCHII	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FOHC	ESRD
		<p>located across a large geographic area with differing weather conditions.</p> <p>Lastly, the unified program must have a coordinated communication plan and training and testing program. For example, if the unified emergency program incorporates a central point of contact at the “system” level who assists in coordination and communication, such as during an evacuation, each facility must have this information outlined within its individual plan.</p> <p>This type of integrated healthcare system emergency program should focus the training and exercises to ensure communication plans and reporting mechanisms are seamless to the emergency management officials at state and local levels to avoid potential miscommunications between the system and the multiple facilities under its control.</p> <p>The training and testing program in a unified emergency preparedness program must be developed considering all of the requirements of each facility type. For example, if a healthcare system includes, hospitals, LTC facilities, ESRD facilities and ASCs, then the unified training and testing programs must meet all of the specific regulatory requirements for each of these facility types.</p> <p>Because of the many different configurations of healthcare systems, from the different types of facilities in the system, to the varied locations of the facilities, it is not possible to specify how unified training and testing programs should be developed. There is no “one size fits all” model that can be prescribed. However, if the system decides to develop a unified and integrated training and testing program, the training and testing must be developed based on the community and facility based hazards assessments at each facility that is participating in the unified emergency preparedness program. Each facility must maintain individual training records of staff and records of all required training exercises.</p> <p>Survey Procedures</p> <ul style="list-style-type: none"> • Verify whether or not the facility has opted to be part of its healthcare system’s unified and integrated emergency preparedness program. Verify that they are by asking to see documentation of its inclusion in the program. • Ask to see documentation that verifies the facility within the system was actively involved in the development of the unified emergency preparedness program. 																	

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RNCHII	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FOHC	ESRD
		<ul style="list-style-type: none"> • Ask to see documentation that verifies the facility was actively involved in the annual reviews of the program requirements and any program updates. • Ask to see a copy of the entire integrated and unified emergency preparedness program and all required components (emergency plan, policies and procedures, communication plan, training and testing program). • Ask facility leadership to describe how the unified and integrated emergency preparedness program is updated based on changes within the healthcare system such as when facilities enter or leave the system. 																	
0043 Transplant Mutual Policies §482.15(g)	(g) Transplant hospitals. If a hospital has one or more transplant centers (as defined in § 482.70)— (1) A representative from each transplant center must be included in the development and maintenance of the hospital's emergency preparedness program; and (2) The hospital must develop and maintain mutually agreed upon protocols that address the duties and responsibilities of the hospital, each transplant center, and the OPO for the DSA where the hospital is situated, unless the hospital has been granted a waiver to work with another OPO, during an emergency.	<p>Hospitals which have transplant centers must include within their emergency planning and preparedness process one representative, at minimum, from the transplant center. If a hospital has multiple transplant centers, each center must have at least one representative who is involved in the development and maintenance of the hospital's emergency preparedness process. The hospital must include the transplant center in its emergency plan's policies and procedures, communication plans, as well as the training and testing programs.</p> <p>The hospital must also collaborate with each OPO in its designated service area (DSA) or other OPO if the hospital was granted a waiver to develop policies and procedures (protocols) that address the duties and responsibilities of each entity during an emergency.</p> <p>Both the hospital and the transplant center are required to demonstrate during a survey that they have collaborated in the planning and development of the emergency program. Both are required to have written documentation of the emergency preparedness plans. However, the transplant center is not individually responsible for the emergency preparedness requirements under §482.15 (see tag [INSERT] at §482.78).</p> <p>Survey Procedures</p> <ul style="list-style-type: none"> • Verify the hospital has written documentation to demonstrate that a representative of each transplant center participated in the development of the emergency program. • Ask to see documentation of emergency protocols that address transplant protocols that include the hospital, the transplant center and the associated OPOs. 	N	N	N	N	N	N	Y	N	N	N	N	N	N	N	N	N	N
0044 OPO Continuity of Operations §486.360(e)	(e) Continuity of OPO operations during an emergency. Each OPO must have a plan to continue operations during an emergency. (1) The OPO must develop and maintain in the protocols with transplant programs required under § 486.344(d), mutually agreed upon protocols that address the duties and responsibilities of the transplant program, the hospital in which the transplant program is operated, and the OPO during an emergency. (2) The OPO must have the capability to continue its operation from an alternate location during an emergency. The OPO could either have: (i) An agreement with one or more other OPOs to provide essential organ procurement services to all or a portion of its DSA in the event the OPO cannot provide those services during an emergency;	<p>An OPO may choose to relocate to an alternate location within its DSA. For instance, if a tornado threat or major flooding was anticipated within one area, however there is another location 20 miles away for the OPO to relocate to, we would anticipate the OPO would address this within its emergency plan. Additionally, OPOs must develop mutually-agreed upon protocols that address the duties and responsibilities of the hospital, transplant center and OPO during emergencies as previously outlined (Reference Tags: 0002, 0012, 0014, 0042). Therefore, these three facility types must work together to develop and maintain policies and programs which address emergency preparedness.</p> <p>Survey Procedures</p>	N	N	N	N	N	N	N	N	N	N	N	N	Y	N	N	N	N

Tag # Title CFR Citations	Tag Text (Regulatory Text)	Interpretive Guidelines (Refer to Appendix Z of SOM) Survey Procedures	RNCHII	ASC	Hospice	PRTF	PACE	Hospital	TC	LTC	ICF/IID	HHA	CORF	CAH	PT/SL	CMHC	OPO	FOHC	ESRD
	(ii) If the OPO has more than one location, an alternate location from which the OPO could conduct its operation; or (iii) A plan to relocate to another location as part of its emergency plan as required by paragraph (a) of this section.	<ul style="list-style-type: none"> Verify that the OPO has mutually-agreed upon protocols with every certified transplant program it is associated with which includes the duties and responsibilities of the hospital, transplant program and OPO during emergencies. Verify that the OPO has a plan in place to ensure continuity of its operation from an alternate location during an emergency. 																	

**Survey & Certification Group: Emergency Preparedness Regulation
FAQs Rounds One – Five**

www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertEmergPrep/Emergency-Prep-Rule.html

FAQs Round One October 28, 2016

Documentation Requirements/ Plans

Q: Can continuity of operations, delegations of authority, succession planning be included in the Emergency Operations Plan, or do you expect to see separate plans?

A: We are not requiring a specific format for how a facility should have their Emergency Plans documented and in which order. Upon survey, a facility must be able to provide documentation of these requirements in the plan and show where the plans are located.

Q: For formatting of the documentation, the standard state policies & procedures are required. Our documents are structured as an Emergency Operations Plan with addendums. Is this allowable?

A: We are not requiring a specific format for the manner in which a facility should have their Emergency Plans documented. Upon survey, a facility must be able to provide documentation of the policies and procedures and show surveyors where the policies and procedures are located.

Q: There are repeated references in the rule to business continuity, business resilience and continuity of operations, but not much clarity is provided as to how the rule differentiates these things or specific requirements. Can you provide more detail as to what will be surveyed?

A: We did not find any references to the term “business resilience” in the final rule. *Business continuity* and *continuity of operations* have the same meaning in the context of this rule. The Assistant Secretary for Preparedness and Response has developed a document that includes information to assist facilities in planning for continuity of operations. The document may be found at: <http://www.phe.gov/Preparedness/planning/hpp/reports/Documents/hc-coop2-recovery.pdf>

Q: How does this regulation affect facilities participating in the Hospital Preparedness Program (HPP)?

A: The regulation does not affect providers and suppliers participating in the HPP. There is no relationship between the HPP and the regulation, as HPP works with the Health Care Coalitions (HCC) and State Departments. The Assistant Secretary for Preparedness and Response (ASPR) administers the HPP which provides leadership and funding through grants and cooperative agreements to states, territories, and eligible municipalities to improve surge capacity and enhance community and hospital preparedness for public health emergencies. For additional information, please contact ASPR’s Technical Resources, Assistance Center, and Information Exchange (TRACIE) at askasprtracie@hhs.gov.

Q: CMS does not require an approved emergency preparedness plan from the local emergency official but must show coordination with local emergency management officials. What level of coordination will be considered acceptable for the facility emergency plan approval? Will a facility only need an approval for their emergency plan from the CMS servicing agency?

A: Providers and suppliers must document efforts made by the facility to cooperate and collaborate with emergency preparedness officials. While we are aware that the responsibility for ensuring a coordinated disaster preparedness response lies upon the state and local emergency planning authorities, the rule states that providers and suppliers must document efforts made by the facility to cooperate and collaborate with emergency preparedness officials. Since some aspects of collaborating with various levels of government entities may be beyond the control of the provider/supplier, we have stated that these facilities must include in their emergency plan a process for cooperation and collaboration with local, tribal, regional, state, and federal emergency preparedness officials. We also encourage providers and suppliers to engage and collaborate with their local HCC, which commonly includes the health department, emergency management,

first responders, and other emergency preparedness professionals. Facilities are required to coordinate with local management officials, such as with their communication plans. For instance, facilities are required to have documentation of their efforts to contact such officials and, when applicable, its participation in collaborative and cooperative planning efforts. Facilities are required to have contact information for emergency officials and who they should contact in emergency events; maintain an emergency preparedness communication plan that complies with both federal and state law; and be able to demonstrate collaboration through the full-scale exercises. We are not requiring official “sign-off” from local emergency management officials; however, if the state requires this action, we would expect that facilities comply with their state laws.

Q: In the past, new facilities seeking licensure needed an approved Comprehensive Emergency Management Plan from local officials. Who will review and approve plans for new facilities in order for them to obtain their licensure?

A: We cannot address how the new regulation will affect state licensure laws. Facilities should contact their state licensing agencies for clarification.

Q: What is the regulation’s definition or intent behind the word “community”?

A: We did not define “community” to afford providers the flexibility to develop disaster drills and exercises that are realistic and reflect their risk assessments. However, the term could mean entities within a state or multi-state region. The goal of the provision is to ensure that healthcare providers collaborate with other entities within a given community to promote an integrated response. In the proposed rule, we indicated that we expected hospitals and other providers to participate in healthcare coalitions in their area for additional assistance in effectively meeting this requirement. Conducting exercises at the coalition level could help to reduce the administrative burden on individual healthcare facilities and demonstrate the value of connecting into the broader medical response community, as well as the local health and emergency management agencies, during emergency preparedness planning and response activities.

Survey Process Requirements

Q. Which agencies will be involved in monitoring compliance? Will monitoring for compliance include State and/or local health officials and emergency management? Are there ways to coordinate monitoring and compliance with local Health/Emergency Management Officials? Will CMS ask local Health/Emergency officials to sign-off (or at least be involved in the process) verifying that these organizations have met the requirements or at least involved in the process of signing-off on?

A: The State Survey Agencies (SA), Accreditation Organizations (AOs), and CMS Regional Offices (ROs) will be involved in monitoring for compliance as is the case with all other requirements for participation in Medicare. Facilities may choose to work with local health and emergency management officials to review the facility's plan to meet local requirements. The facility has the option of choosing to seek approval of its plan from state/local emergency preparedness officials. We do not regulate state and local emergency management officials.

Q: What are the consequences for not meeting these new requirements? Will any leniency be given for organizations that have started this type of planning but didn't complete by November 15, 2017? Will any warnings be issued before any actions taken against a particular organization?

A: Providers/suppliers have one year to implement the EP requirements. Surveying for compliance to these requirements will begin in November 15, 2017. There will be no exceptions for the requirements and non-compliance will follow the same process non-compliance with any other Conditions of Participation (CoPs) and Conditions for Coverage (CfCs) for the facility at hand.

Q: Will this be an incentive - penalty such as those associated with Meaningful Use? Will it just be a penalty? How will surveys be conducted? When will we have access to the survey tool?

A: The implementation of this new regulation is not linked to an incentive program. Facilities found to be out of compliance with the requirements will follow the same enforcement process as with any other CoP/CfC that is found to be out of compliance. These new regulations are a condition or requirement to participate in Medicare. We anticipate releasing the Interpretive Guidelines and Survey Procedures in spring of 2017. In the interim, we are posting helpful tools and relevant information on the SCG Emergency Preparedness Website to assist facilities in meeting the requirements.

Q: What process/documentation/resources will SA surveyors use to assure compliance with the various facility types?

A: As always, surveyors will use the Interpretive Guidelines and Survey Procedures in the State Operations Manual (SOM). Surveyors will also be trained on the requirements before implementation.

Accrediting Organizations (AOs)

Q: Could CMS provide a listing to the different Accrediting Organizations?

A: Please see: <https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertificationGenInfo/Downloads/Accrediting-Organization-Contacts-for-Prospective-Clients-.pdf>

Q: How are AOs expected to implement the new rule into their programs?

A: AOs will follow the same process for developing standards that will meet or exceed CMS requirements of the new rule.

Q: If an AO already has emergency preparedness standards or emergency preparedness program requirements, how does the new rule affect their current standards?

A: AOs will need to submit their emergency preparedness standards/programs to CMS for review. AOs are required to meet or exceed the CMS CoPs/CfCs requirements; therefore the AOs must demonstrate to CMS that their standards meet or exceed all CMS' new EP requirements.

Testing and Training

Q: What does the term “training” encompass? Is the content and the extent of the training at the discretion of the facility?

A: A well organized, effective training program must include initial training for new and existing staff in emergency preparedness policies and procedures as well as annual refresher trainings. The facility must offer annual emergency preparedness training in which staff can demonstrate knowledge of emergency procedures. The facility must also conduct drills and exercises to test the emergency plan to identify gaps and areas for improvement. We expect facilities to delineate responsibilities for all of their facility's workers in their emergency preparedness plans and to determine the appropriate level of training for each professional role. Therefore facilities will have discretion in determining what encompasses appropriate training for the different staff positions/roles.

Q: Please define “all-employees” in the term of being able to demonstrate knowledge of emergency plans and procedures.

A: Employee's or the term “staff” refers to all individuals that are employed directly by a facility. The phrase “individuals providing services under arrangement” means services furnished under arrangement that are subject to a written contract conforming with the requirements specified in section 1861(w) of the Act. We refer providers back to the regulation text for further information (81 FR. 63891).

Q: What kind of training will be developed specifically for providers and suppliers to prepare for implementation of the rule?

A: CMS does not expect to develop training specifically for providers and suppliers. Healthcare associations and state, local and other Federal healthcare agencies may provide training for providers and suppliers. However, training provided by these organizations is only a tool to assist facilities in preparing for implementation of the rule and does not mean that a provider or supplier is in compliance by having received the training.

Miscellaneous

Q: Does the Final Rule apply to pharmacies (both community as well as hospital)?

A: No, the regulation does not apply to stand alone, community pharmacies. The rule does apply to pharmacies that are considered a department of a Medicare participating facility (hospital, ASC, etc.).

Q: Does this regulation apply to physician offices?

A: The new EP requirements do not apply to physician offices that are not part of a certified Medicare participating facility. Physicians' offices or practices that are considered part of a certified Medicare participating facility would be required to meet the regulations.

Q: Does the rule apply to providers/suppliers participating in Medicaid?

A: If a Medicaid provider is required to meet the requirements for participation in Medicare in order to receive Medicaid payment, that provider is required to comply with the EP requirements, along with all of the other Medicare CoPs or CfCs for that provider. For example, Medicaid only hospitals must meet the Medicare requirements so they must comply with all of the hospital CoPs, including the EP requirements. Note that not all provider types have a provision requiring them to meet the Medicare requirements in order to be Medicaid participating.

FAQs Round Two - November 15, 2016

Risk Assessments and Documentation

Q: Which Hazard Vulnerability Assessment (HVA) or Risk Assessment is recommended for use by providers? How will surveyors review the Risk Assessments for compliance?

A: Providers and suppliers must have a written Risk Assessment based on an “all-hazards” approach, or HVA. We are not requiring a specific format to be used, however, we recommend facilities who have not prepared a Risk Assessment to reach out to ASPR TRACIE who can provide additional resources. Additional guidance will be forthcoming in the Interpretive Guidelines that will include survey procedures for surveyors.

Training and Testing

Q: What are the requirements for Ambulatory Surgical Centers (ASCs) regarding the participation in a community full- scale exercise?

A: Per 416.54(d)(2)(i) of the final rule an ASC is required to participate in a full-scale exercise that is community-based. If the ASC experiences an actual natural or man-made emergency that requires activation of the emergency plan, the ASC is exempt from engaging in a community-based or individual, facility-based full-scale exercise for 1 year following the onset of the actual event. (64024 Federal Register/Vol. 81, No. 180/Sep. 16, 2016/Rules and Regulations). Please refer to page 63900 of the final rule that stated if a community disaster drill is not available, we would require an ASC to conduct an individual facility-based disaster drill.

Transfer Agreements and Coordination Required

Q: Are there specific Memorandum of Understanding (MOU) requirements in the new guidelines such as a required MOUs list to be sure all the bases are covered?

A: The regulation does not specify provider and supplier MOUs; however, the regulation does speak to the need for transfer agreements depending on the facility type. For example, during an emergency, if a patient requires care that is beyond the capabilities of the ASC, we would expect that ASCs would transfer patients to a hospital with which the ASC has a written transfer agreement, as required by existing § 416.41(b), or to the local hospital, that meets the requirements of §416.41(b)(2), where the ASC physicians have admitting privileges. (Federal Register/Vol. 81, No. 180/Sept 16, 2016/Rules and Regulations 63899). Therefore, we recommend facilities review current CoPs/CfCs for specific details on transfer agreements. A sample Transfer Agreement is also located under the download section at <https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/SurveyCertEmergPrep/Emergency-Prep-Rule.html>. ASPR TRACIE may also provide sample transfer agreements currently available.

Q: General inquiry on generator: Does the generator have to be able to power up AC/Heat. Can you please clarify for me, is that a requirement with the final rule?

A: The EP regulation requires Hospitals, Critical Access Hospitals and Long-term Care Facilities to have generators. The regulation also requires health care facilities to have alternate sources of energy to maintain temperatures to protect patient health and safety and for the safe and sanitary storage of provisions. If a facility needs a generator to meet the temperature requirement then it must provide the necessary level of generator with a capacity to run a HVAC system.

Q: Do PACE programs need to meet generator requirements?

A: The LSC may require a generator at certain PACE locations if the services provide electrical life support or other critical care. The EP regulation also requires PACE facilities to have alternate sources of energy to maintain temperatures to protect patient health and safety and for the safe and sanitary storage of provisions. If a facility needs a generator to meet the temperature requirement then it must provide the necessary level of generator with a capacity to run a HVAC system.

Q: What is the frequency of generator testing according to the NFPA 110?

A: NFPA 110, *Standard for Emergency and Standby Power Systems* has many requirements for the installation, maintenance and testing of generators, depending on the type of generator. Basic requirements are that a generator be inspected weekly and test run for 30 minutes monthly.

Q: Are all Nursing Homes required to have a generator? What if the Nursing Home doesn't currently have a generator? Must they install one? Is compliance with NFPA 70 & NFPA 110 sufficient, or are there additional requirements regarding the generator and/or fuel capacity?

A: The EP rule requires long term care (LTC) facilities to have a generator. The regulation also requires LTC facilities to have alternate sources of energy to maintain temperatures to protect patient health and safety and for the safe and sanitary storage of provisions. If a facility needs a generator to meet the temperature requirement then it must provide the necessary level of generator with a capacity to run a HVAC. There may be state and local regulations that have additional requirements regarding the generator and any required fuel capacity.

Q: Are there recommended types of generators?

A: CMS does not recommend a specific type of generator. Generator selection is dependent on the needs of the facility to meet the requirements of the regulation.

Q: Can you tell me what the requirements are for generators in a nursing home under the new emergency preparedness rule? Are "whole building" generators required or would portable generators that only power certain things be sufficient?

A: The requirements for LTC facilities are located at 483.73(e) of the final rule (**Federal Register** /Vol. 81, No. 180 / Friday, September 16, 2016 /Rules and Regulations page 64031.) Regarding "whole building" generators, the new rule does not specify that a facility must have a generator that would support the operations of a "whole building."

Q: Does the requirement to maintain temperatures via alternate power (Generators) apply to areas where pharmaceuticals and other temperature limited storage criteria is specified by the manufacturer?

A: Under 482.15 (b)(1)(ii)(A) temperatures to protect patient health and safety and for the safety and sanitary storage of provisions. Refer also to (i) provisions which refers to pharmaceutical supplies as provisions. So yes they need to maintain temperatures of storage areas.

Q: Can you explain the difference between the Emergency and Standby Power Systems requirement and the requirement to have policies and procedures for alternate sources of energy to maintain temperatures to protect resident health and safety and for the safe and sanitary storage of provisions, emergency lighting, fire detection, extinguishing, alarm systems and sewage and waste disposal?

A: The “emergency and standby power systems” requirement only applies to hospitals, CAHs and LTC facilities and requires these facilities to have a generator. The “alternate sources of energy” requirement applies to hospitals, CAHs, LTC facilities, RNCHIs, hospices, PRTFs, PACE organizations, and ICF/IIDs. This standard/requirement does not specify that the facility (other than hospitals, CAHs and LTC facilities) must have a generator. However, in order maintain safe temperatures, emergency lighting, etc., facilities may have to install generators if they do not have other adequate alternate sources of energy to be in compliance with the rule.

Misc.

Q: Does the rule apply to Adult Day Healthcare Programs (ADHCPs)? What if the ADHCP or other entity is co-located or housed in a nursing home’s building?

A: The regulation is applicable to 17 Medicare and/or Medicaid providers and suppliers. The complete listing can be found under our download section on this website. This regulation does not apply to ADHCPs. If a non-participating entity (such as a ADHCP) is located within a Medicare and/or Medicaid participating facility, we would expect the participating facility to consider the non-participating entity when developing its emergency plans.

FAQs Round Three - December 23, 2016

Policies and Procedures and Documentation

Q: If a large health system has operating guidelines which include language described in the policies and procedures section, but does not have formal policies as approved by the hospital board etc., are healthcare facilities required to have formal policies or are official operating guidelines sufficient?

A: The regulation is clear that facilities must have “policies and procedures” in place as opposed to “operating guidelines.” Policies are considered a more formal, definite method or course of action to be adhered to. Therefore facilities must develop and maintain “policies” and procedures to meet the requirements of the regulation. Facilities may choose to include relevant language from their “operating guidelines” in their policies and procedures as appropriate. Facilities should be aware that surveyors may ask to see a copy of the facilities “policies” and not “operating guidelines.”

Q: If we choose to conduct a functional versus a community based test of the plan, what kind of justification do we have to provide on why we chose one over the other? Do we have to demonstrate that we tested our coordination with referrers and hospitals and community providers under a functional assessment?

A: We are not specifying the format of documentation to allow for flexibility. However, we would encourage facilities who chose a functional versus community based test to show why this approach was more favorable- i.e. community based testing is not available due to the rural area/geographic location of the facilities.

Q: The rule implies that facilities need to ensure their vendors have a business continuity plan to continue to provide a supply source during times of emergency. Do you have any guidance as to what vendors need to have or what they should provide to these facilities that will make the facilities compliant?

A: Facilities are required to provide subsistence needs for staff and patients, whether they evacuate or shelter in place. Those provisions include but are not limited to: food, water, medical supplies and pharmaceutical supplies.

Training and Testing

Q: Regarding fulfilling the testing needs: Do we indeed to conduct two tests a year? And minimally one of them needs to be a community based test? If an emergency presents itself between November 15, 2017 and December 31, 2017, would that satisfy one testing need? Would that be the community based need? And would that cover us for the period until November 15, 2018 or until the end of the calendar year 2017?

A: Facilities are required to participate in a full-scale exercise that is community-based or when a an individual facility-based exercise when a community-based exercise is not accessible AND conduct an additional exercise that may include a second full-scale community or facility-based exercise or a tabletop exercise (as described in the regulations.) So yes, a facility is required to conduct two tests annually. If the facility experienced an emergency and had to activate its emergency plan between Nov 15, 2017 and Dec 31, 2017 that would satisfy one of the annual testing

requirements and would exempt the facility from engaging in a community or facility based exercise for one year following the date of the actual emergency event. The “annual” testing requirement will not be measured on a calendar year basis which is Jan 1 through Dec 31. The annual requirement will be measured from the date of the last actual emergency event or the date the exercise/testing took place.

Alternative Sources of Energy

Q: What are the requirements for facilities regarding HVAC systems and alternate source energy?

A: The following providers have a mandatory requirement based on the new EP regulation to have an emergency and standby power system, i.e. a generator: Hospitals, LTC, and CAHs. The following providers have a mandatory requirement based on the new EP regulation to have an alternate source of energy to maintain temperatures to protect [patient, resident, participant, client] health and safety and for the safe and sanitary storage of provisions: RNHCI, Hospice (inpatient), PRTF, PACE, Hospitals, LTC, ICF/IIDs, and CAH. During an emergency situation, the providers listed above with a mandatory requirement for alternate sources of energy, must be able to maintain temperatures. Maintaining temperatures could involve heating or cooling the facility to maintain temperature levels within the facility to protect the individual’s health and safety, as well as the safe and sanitary storage of provisions. During the risk assessment a provider will need to determine how they will be able to maintain temperatures that will protect the health and safety of (patient, resident, participant, client) and the safe and sanitary storage of provisions if their facility loses power. The provider needs to determine how they will provide heating or cooling to their facility, if required, to maintain temperatures during an emergency situation, if they lose power. We recommend facilities also review the preamble at Page 63882 Federal Register / Vol. 81, No. 180/ Friday, September 16, 2016. Additional guidance will be forthcoming in the Interpretive Guidelines.

Q: Do generator requirements apply to the following provider types: Small ICF/IID’s; Home and Community Based Waiver (1915(c))?

A: The regulation does not make a distinction between ICF/IIDs and “small” ICF/IIDs. According to §483.475(b)(ii) ICF/IIDs have a mandatory requirement to provide alternate sources of energy to maintain the following items: §483.475(b)(ii) Alternate sources of energy to maintain the following:

- (A) Temperatures to protect client health and safety and for the safe and sanitary storage of provisions.
- (B) Emergency lighting.
- (C) Fire detection, extinguishing, and alarm systems.
- (D) Sewage and waste disposal.

As per the previous FAQs posted (11-18-16), the above provision does not specify or require that a facility must have a generator. The EP regulation requires Hospitals, Critical Access Hospitals and Long-term Care Facilities to have generators. Additionally, the Home and Community Based Waiver (1915(c)) participate in Medicaid only and are not surveyed for the EP requirements.

Q: The regulation states: (ii) Alternate sources of energy to maintain the following: (A) Temperatures to protect patient health and safety and for the safe and sanitary storage of provisions. (B) Emergency lighting. (C) Fire detection, extinguishing, and alarm systems. (D) Sewage and waste disposal. What is meant by “provisions” in (ii)(a)?

A: Provisions include: food, water, pharmaceuticals or medications and medical supplies. At §482.15(b)(1)(ii)(D), we proposed that the hospital develop policies and procedures to address the provisions of sewage and waste disposal including solid waste, recyclables, chemical, biomedical waste, and waste water. This provision also includes policies and procedures which address ‘pharmaceuticals or medications/medical supplies (Reference Page 63880 Federal Register / Vol. 81, No. 180).

Misc.

Q: Some vendors are telling healthcare facilities that they need to purchase certain quantities of medically related supplies in order to be in compliance with the new EP rule. What supplies and quantities (if any) do healthcare facilities need to purchase to be in compliance?

A: The regulation does not require any specific items and quantities that facilities must have to be in compliance with the rule. It is up to each individual facility to conduct an assessment of its facility’s supply needs during an emergency and make purchases based on its assessment.

FAQs Round Four: Clarifications & Definitions - January 13, 2017

Q: "I believe there is a typo on Page 64033, §483.475(d) where it notes §483.470(h) - I believe it should read §483.470(i)."

A: Correct, there is a typo. The standard for evacuation drills is located at 483.470(i), not (h).

Q: The CAH standard at §485.625(e)(2) is missing a “maintenance” requirement for power systems. However, the same standard for hospitals and LTC facilities contains a “maintenance” requirement for power systems. Was this a technical mistake? Should CAHs also be required to “maintain” power systems?

A: Correct, there was an omission. §485.625(e)(2) should state, The CAH must implement emergency power system inspection, testing and *maintenance* requirements found in the Health Care Facilities Code, NFPA 110, and the Life Safety Code.

Examples of Table-Top Exercises (TTX) or Full-Scale Exercises

Q: Some providers have asked CMS to provide examples for what exercises facilities should consider.

A: The training and exercise requirements of the regulation call for individual-facility and/or full-scale community-based exercises, the below are some examples of exercise considerations:

- Earthquakes
- Tornados
- Hurricane
- Flooding
- Fires
- Cyber Security Attack
- Single-Facility Disaster (power-outage)
- Medical Surge (i.e. community disaster leading to influx of patients)
- Infectious Disease Outbreak
- Active Shooter

Clarifications on Definitions

All-Hazards Approach: An all-hazards approach is an integrated approach to emergency preparedness planning that focuses on capacities and capabilities that are critical to preparedness for a full spectrum of emergencies or disasters, including internal emergencies and a man-made emergency (or both) or natural disaster. This approach is specific to the location of the provider or supplier and considers the particular type of hazards most likely to occur in their areas. These may include, but are not limited to, care-related emergencies, equipment and power failures, interruptions in communications, including cyber-attacks, loss of a portion or all of a facility, and interruptions in the normal supply of essentials such as water and food. Rather than managing planning initiatives for a multitude of threat scenarios all-hazards planning focuses on developing capacities and capabilities that are critical to preparedness for a full spectrum of emergencies or disasters. Thus, all-hazards planning does not specifically address every possible threat but ensures those hospitals and all other providers and suppliers will have the capacity to address a broad range of related emergencies

Business Impact Analysis (BIAs)¹ are a method of identifying and evaluating the effects various threats/ hazards may have on the ability of an organization to perform its essential functions and the resulting impact of those effects. It is through the BIA that organizations can identify problem areas (gaps, weaknesses, vulnerabilities) and in turn, organization leadership may use the BIA results to support risk management decision making.

Emergency/Disaster: An event that can affect the facility internally as well as the overall target population or the community at large.

Emergency Preparedness Program: The Emergency Preparedness Program is a facility’s comprehensive approach to meeting the health and safety needs of their patient population and provides facilities with guidance on how to respond to emergency situations that could impact the operation of the facility, such as natural or man-made disasters. It includes (1) all-hazards risk assessment and emergency planning, development and implementation of policies and procedures, a communication plan, and training and testing. The program as a whole consists of the Emergency Plan, which is based on the four core elements.

Emergency Plan: An emergency plan is one part of a facility’s emergency preparedness program and provides the framework which includes conducting facility-based and community-based risk assessments that will assist a facility in addressing patient needs along with the continuity of business operations. Additionally, a plan will support, guide and ensure a facility’s ability to collaborate with local emergency preparedness officials.

Facility-Based: When discussing the terms “all-hazards approach” and facility-based risk assessments, we consider the term “facility-based” to mean that the emergency preparedness program is specific to the facility. Facility-based includes, but is not limited to, hazards specific to a facility based on the geographic location; Patient/Resident/Client population; facility type and potential surrounding community assets (i.e. rural area versus a large metropolitan area).

Full-Scale Exercise: A full scale exercise is a multi-agency, multijurisdictional, multi-discipline exercise involving functional (for example, joint field office, emergency operation centers, etc.) and “boots on the ground” response (for example, firefighters decontaminating mock victims).

Hazard Vulnerability Assessments (HVAs)² are systematic approaches to identifying hazards or risks that are most likely to have an impact on a healthcare facility and the surrounding community. The HVA describes the process by which a provider or supplier will assess and identify potential gaps in its emergency plan(s).

Potential loss scenarios should be identified first during the risk assessment. Once a risk assessment has been conducted and an facility has identified the potential hazards/risks they may face, the organization can use those hazards/risks to conduct a Business Impact Analysis.

Risk Assessment: This is general terminology that is within the emergency preparedness regulations and preamble to the Final Rule (81 Fed. Reg. 63860, Sept. 16, 2016) which describes a process facilities are to use to assess and document potential hazards within their areas and the vulnerabilities and challenges which may impact the facility. Additional terms currently used by the industry are all-hazards risk assessments are also referred to as Hazard Vulnerability Assessments (HVAs) , or all-hazards self-assessments. For the purposes of these guidelines, we are using the term “risk assessment,” which may include a variety of current industry practices used to assess and document potential hazards and their impacts.

This guidance is not specifying which type of generally accepted emergency preparedness risk assessment facilities should have, as the language used in defining risk assessment activities is meant to be easily understood by all providers and suppliers that are affected by this final rule and is aligned with the national preparedness system and terminology (81 Fed. Reg. 63860, at 63875). However, facilities are expected to conduct a full assessment of hazards based on geographical location and the individual facility dynamics, such as patient population.

Staff: The term "staff" refers to all individuals that are employed directly by a facility. The phrase "individuals providing services under arrangement" means services furnished under arrangement that are subject to a written contract conforming with the requirements specified in section 1861(w) of the Social Security Act.

Table-top Exercise (TTX): A table-top exercise is a group discussion led by a facilitator, using narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan. It involves key personnel discussing simulated scenarios, including computer-simulated exercises, in an informal setting. TTXs can be used to assess plans, policies, and procedures.

FAQs: Round Five - As of September 2017

Real World Emergencies and Documentation

Q: If a facility accepted patient transfers due to another facility’s real-world emergency, is the “accepting” facility exempt from the annual full-scale exercise requirement under 482.15(d)(2)(i)?

A: The receiving facility may be considered under the exemption above for 1 year following the actual disaster ONLY if it activated its own facility emergency plans. For instance, in a patient surge incident which led nursing home residents to be evacuated to a hospital, the hospital would be exempt if it activated its emergency plan. *Note: This exemption is applicable to all provider and supplier types.*

Medicaid and Understanding Who This Applies to

Q: Do Medicaid only facilities have to comply with the EP Final Rule.

A: If a Medicaid only facility is one of the 17 provider or supplier types included in the Final Rule, then yes, that facility must comply.

For example, Medicaid only hospitals must meet the Medicare requirements so they must comply with all of the hospital CoPs, including the EP requirements. Note that not all provider types have a provision requiring them to meet the Medicare requirements in order to be Medicaid participating.

Determining Needs for Compliance- Medicare Certification

Note: Medicare certified providers are issued a CMS Certification Number (CCN). All locations of the certified provider that operate and bill under that CNN are considered to be part of that provider (even if located off campus.) For example, a hospital may have several off- campus clinics that operate under the hospital's CCN. Therefore those off-campus clinics are not free-standing clinics and are part of the hospital. Those clinics are required to comply with all of the hospital CoPs, including the EP CoP. One CCN means one provider, but that provider can have multiple locations. More than one provider cannot exist under one CCN.

Q: There are some clinics that are associated with a hospital (either are actually physically attached to the hospital or are not) and do not have the same CCN number, do these clinics need to have their own emergency plans or can they have the same plans as the hospital?

A: Clinics and any other type of facility that do not operate under the same CCN of a hospital that they are “affiliated with” must have their own emergency preparedness program/plan.

Q: If multiple sites within the same county, each with separate CCN (such as an RHC/FHQC) exist, does each location need to have its own program/risk assessment?

A: Each separately certified facility (separate CCNs) must have its own risk assessment.

Q: How does this rule apply to free-standing emergency departments?

A: Only emergency departments (located on or off campus) that are part of a Medicare certified hospital and operate under that hospital's CCN (CMS Certification Number) are required to be in compliance with the CMS Final Rule.

Q: We currently have Outpatient Speech Language Pathology but do not have Outpatient Physical Therapy. Do we fall under the following type of Facility impacted by the Emergency Preparedness Rule: Clinics, Rehabilitation Agencies, and Public Health Agencies as Providers of Outpatient Physical Therapy and Speech-Language Pathology Services?

A: Both Outpatient Physical Therapy (OPT) and Outpatient Speech Language Pathology (OSP) are covered under the EP Condition for Participation. It does not matter whether the facility is providing one or both of the services.

Q: We are a statewide comprehensive healthcare system with multiple "Clinics as Providers of Outpatient Physical Therapy Services". However, those clinics do not have their own CMS Certification Numbers - they receive reimbursement under the CCN of their nearest affiliated Hospital or Critical Access Hospital, some without being located on the campus of those hospitals, or possibly even in different counties. Are these clinics required to comply with this Rule?

A: Clinics and outpatient departments that are off-campus provider-based departments of hospitals or CAHs are required to meet the requirements of the final rule. OPTs and Clinics that participate in Medicare/Medicaid but are not a provider-based department of a hospital or CAH are required to meet the requirements of the regulation, under §485.727.

General Questions

Q: The Interpretive Guidelines state that facilities should consider that if an evacuation is in progress and the facility must evacuate, leadership should consider the needs for critically ill patients to be evacuated and accompanied by staff who could provide care and treatment enroute to the designated relocation site, in the event trained medical professionals are unavailable by the transportation services. What are the expectations when the staff arrive at the intake facility and are asked to stay to assist?

A: The guidance touches on the importance of succession planning, as well as identification of patient “at-risk” populations. We do not address their status after they have arrived at an alternate location. Providers might consider different support scenarios for evacuated patients when developing their evacuation policies and procedures such as state and local requirements and or other considerations for both evacuating and hosting facilities. For example, if the evacuating facility is evacuating all patients and it is evident that the intake facility needs assistance from the evacuated facility staff, this would be acceptable as long as each facility complies with their state and local laws as it relates to credentialing and providing services.

Life Safety Code

Q: Under the CMS Fire Safety Final Rule (published 05/04/2016), the regulation adopted NFPA 99 with the exceptions of:

Ch 7 - Information Technology and Communications Systems for Health Care Facilities

Ch 8 - Plumbing

Ch 12 - Emergency Management; and Chapter 13— Security Management.

Under the EP Final Rule, an incorporation by reference states that the NFPA 99 was adopted in its entirety. Do facilities under the EP requirements now need to include the four chapters previously exempted?

A: The four chapters have not be adopted by CMS. The Chapters 7, 8, 12 and 13 were not adopted as part of the adoption of the 2012 edition of the NFPA 99. Therefore, please consider the four chapters to remain exempt under the EP requirements. However, these four chapters of the 2012 edition of NFPA 99 may serve as a guide or additional resource under emergency management.

Q: Under what conditions are portable generators appropriate?

A: Within Appendix Z- Interpretive Guidelines for Emergency Preparedness for All Providers and Suppliers, we discuss under Standard (b), which puts forth the requirements for some providers to have temperature control and alternate source energy, the use of portable generators. The guidance states: *“If a facility determines the best way to maintain temperatures, emergency lighting, fire detection and extinguishing systems and sewage and waste disposal would be through the use of a portable generator, then the Life Safety Code (LSC) provisions, such as generator testing and fuel storage, etc. outlined under the NFPA guidelines would not be applicable. Portable generators should be operated, tested, and maintained in accordance with manufacturer, local and/or State requirements.”*

This only would apply to those facilities affected by Standard (b), with the exception of providers and suppliers who choose to do this outside of the EP requirements, but DOES NOT apply to Hospitals, CAHs and LTC facilities. NFPA 110 requires emergency power supply systems to be permanently attached, therefore portable and mobile generators would not be permitted as an option to provide or supplement emergency power to Hospitals, CAHs or LTC facilities as outlined within the Emergency Power section-Standard (e) requirements.

Training Exercises and “Annual” Requirement

Q: If a state or local emergency response agency conducts its annual emergency preparedness exercise the 3rd week of November 2017 (past the CMS implementation date of November 15, 2017), will a facility be out of compliance if it does not participate in a full-scale community based exercise by November 15, 2017, but instead participates in the state/local exercise during the third week of November 2017?

A: Facilities must be compliant with the two training exercises requirement by November 15, 2017. The regulation allows for facilities to conduct an individual facility-based exercise if a full-scale community-based exercise is unavailable. If the facility chooses not to participate in a community-based exercise prior to November 15, 2017 and does not complete an individual full-scale facility-based exercise (in place of a community-based exercise), it would be out of compliance.

Surveyors will likely cite the non-compliance as standard-level non-compliance (Level C for Long Term Care facilities) in this first year as modified enforcement. As with any other non-compliance, the facility would submit an acceptable plan of correction which would include plans to participate in the required training exercises. Facilities will be expected to demonstrate to surveyors that it has completed 2 of the required training exercises within the previous 12 months, or between November 15th and November 15th of the following year.

It is important to note that facilities which experience an actual emergency requiring activation of their emergency plan are exempt from the full-scale requirement for that annual year, but must still meet the second exercise requirement (i.e. table-top exercise or exercise of their choice).

Facilities with Multiple Locations versus Integrated Health Systems

Q: What are the requirements for facilities with multiple locations versus a separately certified facility that is part of an integrated health system that elects to have a unified and integrated emergency preparedness program?

A: Each separately certified Medicare participating facility (i.e. different Certification Number (CCN) numbers), is responsible for maintaining compliance with the EP requirements whether the facility is part of an integrated health system or not. If a separately certified facility is part of a health system that has elected to have a unified and integrated emergency preparedness program, the facility may choose to participate in the healthcare system’s unified and coordinated emergency preparedness program. This does not exempt a separately certified facility from demonstrating independent compliance with the EP regulations. Rather, it permits a separately certified facility to partner with the health system in meeting the EP requirements. Surveyors assess compliance in separately certified facilities. They do not assess compliance of “health systems”. It is important to understand that a separately certified facility can have multiple locations all operating under one CCN. All locations of a facility operating under the same CCN must be included in the facility’s emergency preparedness program and be in compliance with all of the EP requirements. This means that all locations of a facility must also be included in the annual training/exercise requirements too. A health system is different in that it contains multiple separately certified facilities all operating under different CCNs. The health system is not certified by CMS and is not assessed for compliance. It is up to each provider/supplier to demonstrate compliance with the requirements upon survey. See examples below.

Hospital Z has one outpatient clinic located outside of the hospital and operates under Hospital Z’s CCN. The outpatient clinic is considered part of Hospital Z and must be in compliance with the EP regulations. The outpatient location of hospital Z must be part of hospital Z’s emergency preparedness program. Emergency policies and procedures for the outpatient clinic must be part of Hospital Z’s emergency program as the clinic is part of the certified hospital.

Hospital Z has a SNF located in a separate building on Hospital Z's campus. Hospital Z and the SNF have separate CCN numbers. Therefore they are separately certified providers and each must meet the EP requirements independently. However, both Hospital Z and the SNF could be part of an integrated health system that elects to have a unified and integrated system emergency preparedness program. In that case Hospital Z and the SNF may participate in the integrated system program to meet the requirements. However, Hospital Z and the SNF are still individually responsible for being in compliance.

An ESRD facility, a LTC facility and a hospital are all separately certified provider/supplier types operating under different CCNs. They are all part of the same healthcare system that has elected to have a unified and integrated system emergency preparedness program and are not co-located. Therefore, these facilities, while separately certified and not co-located, can choose to participate in the system's unified and integrated emergency preparedness program.

Hospital B is has a co-located hospital unit (from Hospital C) within the same building. Both hospitals have separate CCN numbers and are not part of the same healthcare system. Because Hospital B and Hospital C are separately certified facilities with separate CCNs they must demonstrate compliance with emergency preparedness as separate entities. Hospital B and hospital C would not be able to participate in the same unified and integrated emergency preparedness program because they are not part of the same healthcare system. However, it is recommended, not required, that both hospital B and hospital C (being co-located in the same building) understand each other's needs, plans for evacuation and potentially coordinate with each other for exercises to be able to assist each other during emergencies as appropriate.
